Notes:

---: Not applicable

FD: Duplicate Sample

mg/kg: milligram per kilogram

N: Normal (Primary) Sample

PAH: Polycyclic Aromatic Hydrocarbons

∑ESBTU: Summation of congener-specific ESBTU values

$\sum ESBTU_{34}$ (Estimated): $\sum ESBTU_{34}$ value estimated by multiplying the $\sum ESBTU_{13}$ result by a conversion factor of 2.75

Notes:
---: Not available
$C_{OC,PAHi,FCVi}$: Effect concentration of a PAH in sediment on an organic carbon basis calculated from the product of its FCV and KOC
$C_{OC,PAHi,Maxi}$: Maximum solubility limited PAH concentration in sediment on an organic carbon basis
FCV: Final Chronic Value
FD: Duplicate Sample
f_{OC}: Fraction Organic Carbon
N: Normal (Primary) Sample
$ESBTU_{FCVi}$: Equilibrium Partitioning Sediment Benchmark Toxic Unit, based on the FCV
C_{OC}: Organic Carbon normalized PAH concentration
mg/kg: milligram per kilogram
PAH: Polycyclic Aromatic Hydrocarbons

Notes:
kg, kilograms
a, ac, acres; km, kilometers
b, Estimated food ingestion rate (kg/day dry weight) for insectivorous birds = (0.54[Body Weight in grams]$^{0.705}$)/1000 (Nagy 2001);
c, Estimated food ingestion rate (kg/day dry weight) for omnivorous birds = (0.670[Body Weight in grams] $^{0.627}$)/1000 (Nagy 2001);
d, Estimated food ingestion rate (kg/day dry weight) for carnivorous birds = (0.849[Body Weight in grams] $^{0.663}$)/1000 (Nagy 2001);
e, Estimated food ingestion rate (kg/day dry weight) for Carnivora = (0.102[Body Weight in grams] $^{0.864}$)/1000 (Nagy 2001);
f, Estimated food ingestion rate (kg/day dry weight) for Rodentia = (0.332[Body Weight in grams] $^{0.774}$)/1000 (Nagy 2001);
g, Estimated food ingestion rate (kg/day dry weight) for insectivorous mammals = (0.373[Body Weight in grams] $^{0.622}$)/1000 (Nagy 2001);
h, Based on assumption from Sample and Suter 1994 that substrate ingestion is negligible for piscivores;
i, Estimated drinking water ingestion rate for birds = (0.059×[body weight in kg]BW$^{0.67}$ (Caulder and Braun, 1983)
j, Estimated drinking water ingestion rate for mammals = (0.099×[body weight in kg]BW$^{0.90}$ (Caulder and Braun, 1983)
k, As cited in the Montana Field Guide, accessed at http://fieldguide.mt.gov/default.aspx
l, Based on red fox soil ingestion rate assuming the soil ingestion rate of top predators does not exceed the soil ingestion rate of red fox.
k, Literature-based incidental substrate ingestion rate was not identified; assumed limited incidental ingestion based on habitat preference for fast-moving, clear streams with sand, pebble, or rocky stream bottoms.
l, Incidental soil ingestion rate is assumed to be negligible based primary foraging strategies of gleaning from branchs or foliage or catching prey on the wing.

Notes:

a, log K_{ww} = 0.87*log K_{ow} - 2 (USEPA, 2007; Jager, 1998)

b, Converted from wet weight to dry weight assuming 16% solids (USEPA, 2005; Jager, 1998)

c, K_{oc} values modeled based on regression equations from Gerstl (1990), for All Compounds: $\log_{oc}K$= A*log K_{ow} + B, where A = slope and B = intercept.

d, K_d = f_{oc}*K_{oc}, where "foc" is the fraction of organic carbon in soil.

f_{oc} is assumed to be: 0.01

e, BAF = K_{ww} (L/kg worm dw) / K_d (L/kg soil dw)

Notes:

a, $BAF_{soil\text{-}mammal}$ model based on LANL (2015) equation for Transfer Factor from soil to dry weight flesh (TF_flesh_dw):

$$BAF_{soil-mammal} = BAF_{beef} \times \left[\frac{\left(FIR_{MAX} \times BAF_{MAX\ plant/invert} + SIR_{MAX}\right)}{(1-MC)}\right]$$

where:

$BAF_{soil\text{-}mammal\ dw}$ = Soil-to-small mammal BAF (mg/kg $flesh_{dw}$ per mg COPEC/kg $soil_{dw}$)
$BAF_{beef\ ww}$ = Diet-to-beef transfer factor (d/kg $beef_{ww}$)
$FIR_{MAX\ ww}$ = Maximum food ingestion rate for LANL prey species (0.305 kg $food_{ww}$/d; LANL, 2015)
$BAF_{MAXPlant/Invert}$ = Maximum BAF for plant or invertebrate dietary items of the prey species (mg/kg $tissue_{ww}$ per mg COPEC/kg $soil_{dw}$)
SIR_{MAX} = Maximum incidental soil ingestion rate for LANL prey species (0.0193 kg $soil_{dw}$/d; LANL, 2015)
MC = Moisture content of flesh (assumed 68 percent per LANL, 2015)

b, Diet-to-beef transfer factor calculated based on RTI (2005), consistent with LANL (2017):

$$LogBAF_{beef\ ww} = Fat_{beef} \times \left(-0.099 \times \log K_{ow}{}^2 + 1.07 \times logKow - 3.56\right)$$

where:

$BAF_{beef\ ww}$ = Diet-to-beef transfer factor (d/kg $beef_{ww}$)
$Fat_{beef\ ww}$ = Fat content of beef; assumed to be 19 percent or 0.19 based on LANL (2017)
K_{ow} = Octanol-water partitioning coefficient

c, Assumed fat content of beef of 19 percent consistent with LANL (2017)

d, $BAF_{plant\ ww}$, Soil-to-plant bioaccumulation factor calculated on wet weight basis by multiplying the plant BAF in Table 3 by 1-moisture content of plant leaves (1 - 0.85 = 0.15 per LANL, 2017).

e, $BAF_{invert\ ww}$, Soil-to-invertebrate bioaccumulation factor calculated on wet weight basis by multiplying the plant BAF in Table 3 by 1-moisture content in soil invertebrates (1 - 0.61 = 0.39; LANL, 2017).

f, Maximum soil-to-tissue BAF between higher of the $BAF_{plant\ ww}$ and $BAF_{invert\ ww}$

Notes:
a, NOAEL is no observable adverse effects level.
b, LOAEL is low observable adverse effects level.
c, Aroclor 1254 used as a surrogate for Aroclor 1248 for both birds and mammals.
d, Di-n-butyl pthalate used as a surrogate for avian exposure to phthalates.
e, TRV based on the NOAEL for a ring-necked pheasant, divided by 8 based on the higher sensitivity of AHR1-dependent changes in gene expression of chickens and chicken-like birds, per Farmahin et al. (2012).
-- Appropriate data are not available from published literature to derive NOAEL and LOAEL values.

TechLaw, 2008, Close-out Letter for Calculating Effect-based Ecological Soil Screening Levels for Fort Devens Ayers, MA. Memorandum from Stan Pauwels (TechLaw) to Bart Hoskins (EPA Region I) dated November 18, 2008. TDF No. 1216, Task Order No. 26, Task No. 01.
United States Environmental Protection Agency (USEPA), 1999, Screening Level Ecological Risk Assessment Protocol for Hazardous Waste Combustion Facilities, EPA530-D-99-001A, August.

Table H1-1a
Estimated Concentrations in Dietary Items of Terrestrial Receptors -Main Plant Area (0-0.5' Interval)
Baseline Ecological Risk Assessment
Columbia Falls Aluminum Company
Columbia Falls, Montana

Notes:

a, Plant tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]). Slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Antimony	-3.233	0.938	USEPA (2007)
Beryllium	-0.5361	0.7345	USEPA (2007)
Cadmium	-0.475	0.546	Bechtel-Jacobs (1998)
Copper	0.668	0.394	Bechtel-Jacobs (1998)
Lead	-1.328	0.561	Bechtel-Jacobs (1998)
Mercury	0.544	-0.996	Bechtel-Jacobs (1998)
Nickel	-2.223	0.748	Bechtel-Jacobs (1998)
Selenium	-0.677	1.104	Bechtel-Jacobs (1998)
Zinc	1.575	0.554	Bechtel-Jacobs (1998)
Acenaphthene	-5.562	-0.8556	USEPA (2007)
Acenaphthylene	-1.144	0.791	USEPA (2007)
Anthracene	-0.9887	0.7784	USEPA (2007)
Benzo(a)anthracene	-2.7078	0.5944	USEPA (2007)
Benzo(a)pyrene	-2.0615	0.975	USEPA (2007)
Benzo(g,h,i)perylene	-0.9313	1.1829	USEPA (2007)
Benzo(k)fluoranthene	-2.1579	0.8595	USEPA (2007)
Chrysene	-2.7078	0.5944	USEPA (2007)
Fluorene	-5.562	-0.8556	USEPA (2007)
Phenanthrene	-0.1665	0.6203	USEPA (2007)

b, Soil-to-plant BAF based on K_{ow} model for non-ionic organic compounds (rinsed foliage data) provided in USEPA (2005), where: log BAF = -0.4057(log K_{ow}) + 1.781; log K_{ow} values obtained from EPA EpiSuite V. 1.69, KOWWIN module.

c, Soil-invertebrate bioaccumulation factor could not be identified; therefore, a conservative default accumulation factor of 1.0 was assumed.

d, Soil invertebrate tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-1.421	0.706	Sample et al. (1999)
Cadmium	2.114	0.795	Sample et al. (1999)
Lead	-0.218	0.807	Sample et al. (1999)
Manganese	-0.809	0.682	Sample et al. (1999)
Selenium	-0.075	0.733	Sample et al. (1999)
Zinc	4.449	0.328	Sample et al. (1999)
2,3,7,8-TCDD	3.533	1.182	Sample et al. (1998a)

e, Bioaccumulation factor estimated as the product of the soil-plant and ingestion-beef factors reported in Baes et al. (1984)

f, Median soil-to-plant uptake factors reported in Bechtel (1998a) were used as bioaccumulation factors.

f, Small mammal tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-4.8471	0.8188	Sample et al. (1998b)
Cadmium	-1.2571	0.4723	Sample et al. (1998b)
Chromium	-1.4599	0.7338	Sample et al. (1998b)
Cobalt	-4.4669	1.307	Sample et al. (1998b)
Copper	2.042	0.1444	Sample et al. (1998b)
Lead	0.0761	0.4422	Sample et al. (1998b)
Nickel	-0.2462	0.4658	Sample et al. (1998b)
Selenium	-0.4158	0.3764	Sample et al. (1998b)
Zinc	4.3632	0.0706	Sample et al. (1998b)
2,3,7,8-TCDD	0.8113	1.0993	Sample et al. (1998b)

g, Pentachlorophenol concentration in small mammal tissue (mg/kg dry weight) calculated based on regression models, where [tissue] = 0.198 + 0.00452([$diet_{invertebrate}$])

h, USEPA (2005) assumes bioaccumulation of PAHs by birds and mammals is minimal due to rapid metabolism of these compounds after ingestion.

i, Small mammal tissue estimated based on the medial BAF for the general model presented in Sample et al. (1998b)

j, No value was identified in the literature. Soil-to-small mammal BF estimated based on the approach presented in Table 5, consistent with LANL (2017).

Table H1-1b
Estimated Concentrations in Dietary Items of Terrestrial Receptors - Main Plant Area (0 - 2' Interval)
Baseline Ecological Risk Assessment
Columbia Falls Aluminum Company
Columbia Falls, Montana

Notes:

a, Plant tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]). Slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Antimony	-3.233	0.938	USEPA (2007)
Beryllium	-0.5361	0.7345	USEPA (2007)
Cadmium	-0.475	0.546	Bechtel-Jacobs (1998)
Copper	0.668	0.394	Bechtel-Jacobs (1998)
Lead	-1.328	0.561	Bechtel-Jacobs (1998)
Mercury	0.544	-0.996	Bechtel-Jacobs (1998)
Nickel	-2.223	0.748	Bechtel-Jacobs (1998)
Selenium	-0.677	1.104	Bechtel-Jacobs (1998)
Zinc	1.575	0.554	Bechtel-Jacobs (1998)
Acenaphthene	-5.562	-0.8556	USEPA (2007)
Acenaphthylene	-1.144	0.791	USEPA (2007)
Anthracene	-0.9887	0.7784	USEPA (2007)
Benzo(a)anthracene	-2.7078	0.5944	USEPA (2007)
Benzo(a)pyrene	-2.0615	0.975	USEPA (2007)
Benzo(g,h,i)perylene	-0.9313	1.1829	USEPA (2007)
Benzo(k)fluoranthene	-2.1579	0.8595	USEPA (2007)
Chrysene	-2.7078	0.5944	USEPA (2007)
Fluorene	-5.562	-0.8556	USEPA (2007)
Phenanthrene	-0.1665	0.6203	USEPA (2007)

b, Soil-to-plant BAF based on K_{ow} model for non-ionic organic compounds (rinsed foliage data) provided in USEPA (2005), where: log BAF = -0.4057(log K_{ow}) + 1.781; log K_{ow} values obtained from EPA EpiSuite V. 1.69, KOWWIN module.

c, Soil-invertebrate bioaccumulation factor could not be identified; therefore, a conservative default accumulation factor of 1.0 was assumed.

d, Soil invertebrate tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-1.421	0.706	Sample et al. (1999)
Cadmium	2.114	0.795	Sample et al. (1999)
Lead	-0.218	0.807	Sample et al. (1999)
Manganese	-0.809	0.682	Sample et al. (1999)
Selenium	-0.075	0.733	Sample et al. (1999)
Zinc	4.449	0.328	Sample et al. (1999)
2,3,7,8-TCDD	3.533	1.182	Sample et al. (1998a)

e, Bioaccumulation factor estimated as the product of the soil-plant and ingestion-beef factors reported in Baes et al. (1984)

f, Median soil-to-plant uptake factors reported in Bechtel (1998a) were used as bioaccumulation factors.

f, Small mammal tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-4.8471	0.8188	Sample et al. (1998b)
Cadmium	-1.2571	0.4723	Sample et al. (1998b)
Chromium	-1.4599	0.7338	Sample et al. (1998b)
Cobalt	-4.4669	1.307	Sample et al. (1998b)
Copper	2.042	0.1444	Sample et al. (1998b)
Lead	0.0761	0.4422	Sample et al. (1998b)
Nickel	-0.2462	0.4658	Sample et al. (1998b)
Selenium	-0.4158	0.3764	Sample et al. (1998b)
Zinc	4.3632	0.0706	Sample et al. (1998b)
2,3,7,8-TCDD	0.8113	1.0993	Sample et al. (1998b)

g, Pentachlorophenol concentration in small mammal tissue (mg/kg dry weight) calculated based on regression models, where [tissue] = 0.198 + 0.00452([$diet_{invertebrate}$])

h, USEPA (2005) assumes bioaccumulation of PAHs by birds and mammals is minimal due to rapid metabolism of these compounds after ingestion.

i, Small mammal tissue estimated based on the medial BAF for the general model presented in Sample et al. (1998b)

j, No value was identified in the literature. Soil-to-small mammal BF estimated based on the approach presented in Table 5, consistent with LANL (2017).

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

signifies special status species, and decisions are made solely on the NOAEL-based HQs.

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_I	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:
signifies special status species, and decisions are made solely on the NOAEL-based HQs.

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:
ADD_{diet} = Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet} = Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF = Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$ = COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i = Dietary fraction of food item i (proportion of food type in the diet)
AUF = Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW = Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$ = Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_S = Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$ = COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

[redacted] signifies special status species, and decisions are made solely on the NOAEL-based HQs.

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

[redacted] signifies special status species, and decisions are made solely on the NOAEL-based HQs.

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Table H2-1a
Estimated Concentrations in Dietary Items of Terrestrial Receptors- Central Landfills Area (0 - 0.5' Interval)
Baseline Ecological Risk Assessment
Columbia Falls Aluminum Company
Columbia Falls, Montana

Notes:

a, Plant tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]). Slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Antimony	-3.233	0.938	USEPA (2007)
Beryllium	-0.5361	0.7345	USEPA (2007)
Cadmium	-0.475	0.546	Bechtel-Jacobs (1998)
Copper	0.668	0.394	Bechtel-Jacobs (1998)
Lead	-1.328	0.561	Bechtel-Jacobs (1998)
Mercury	0.544	-0.996	Bechtel-Jacobs (1998)
Nickel	-2.223	0.748	Bechtel-Jacobs (1998)
Selenium	-0.677	1.104	Bechtel-Jacobs (1998)
Zinc	1.575	0.554	Bechtel-Jacobs (1998)
Acenaphthene	-5.562	-0.8556	USEPA (2007)
Acenaphthylene	-1.144	0.791	USEPA (2007)
Anthracene	-0.9887	0.7784	USEPA (2007)
Benzo(a)anthracene	-2.7078	0.5944	USEPA (2007)
Benzo(a)pyrene	-2.0615	0.975	USEPA (2007)
Benzo(g,h,i)perylene	-0.9313	1.1829	USEPA (2007)
Benzo(k)fluoranthene	-2.1579	0.8595	USEPA (2007)
Chrysene	-2.7078	0.5944	USEPA (2007)
Fluorene	-5.562	-0.8556	USEPA (2007)
Phenanthrene	-0.1665	0.6203	USEPA (2007)

b, Soil-to-plant BAF based on K_{ow} model for non-ionic organic compounds (rinsed foliage data) provided in USEPA (2005), where: log BAF = -0.4057(log K_{ow}) + 1.781; log K_{ow} values obtained from EPA EpiSuite V. 1.69, KOWWIN module.

c, Soil-invertebrate bioaccumulation factor could not be identified; therefore, a conservative default accumulation factor of 1.0 was assumed.

d, Soil invertebrate tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-1.421	0.706	Sample et al. (1999)
Cadmium	2.114	0.795	Sample et al. (1999)
Lead	-0.218	0.807	Sample et al. (1999)
Manganese	-0.809	0.682	Sample et al. (1999)
Selenium	-0.075	0.733	Sample et al. (1999)
Zinc	4.449	0.328	Sample et al. (1999)
2,3,7,8-TCDD	3.533	1.182	Sample et al. (1998a)

e, Bioaccumulation factor estimated as the product of the soil-plant and ingestion-beef factors reported in Baes et al. (1984)

f, Median soil-to-plant uptake factors reported in Bechtel (1998a) were used as bioaccumulation factors.

f, Small mammal tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-4.8471	0.8188	Sample et al. (1998b)
Cadmium	-1.2571	0.4723	Sample et al. (1998b)
Chromium	-1.4599	0.7338	Sample et al. (1998b)
Cobalt	-4.4669	1.307	Sample et al. (1998b)
Copper	2.042	0.1444	Sample et al. (1998b)
Lead	0.0761	0.4422	Sample et al. (1998b)
Nickel	-0.2462	0.4658	Sample et al. (1998b)
Selenium	-0.4158	0.3764	Sample et al. (1998b)
Zinc	4.3632	0.0706	Sample et al. (1998b)
2,3,7,8-TCDD	0.8113	1.0993	Sample et al. (1998b)

g, Pentachlorophenol concentration in small mammal tissue (mg/kg dry weight) calculated based on regression models, where [tissue] = 0.198 + 0.00452([$diet_{invertebrate}$])

h, USEPA (2005) assumes bioaccumulation of PAHs by birds and mammals is minimal due to rapid metabolism of these compounds after ingestion.

i, Small mammal tissue estimated based on the medial BAF for the general model presented in Sample et al. (1998b)

j, No value was identified in the literature. Soil-to-small mammal BF estimated based on the approach presented in Table 5, consistent with LANL (2017).

Table H2-1b
Estimated Concentrations in Dietary Items of Terrestrial Receptors - Central Landfills Area (0 - 2' Interval)
Baseline Ecological Risk Assessment
Columbia Falls Aluminum Company
Columbia Falls, Montana

Notes:

a, Plant tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]). Slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Antimony	-3.233	0.938	USEPA (2007)
Beryllium	-0.5361	0.7345	USEPA (2007)
Cadmium	-0.475	0.546	Bechtel-Jacobs (1998)
Copper	0.668	0.394	Bechtel-Jacobs (1998)
Lead	-1.328	0.561	Bechtel-Jacobs (1998)
Mercury	-0.996	0.544	Bechtel-Jacobs (1998)
Nickel	-2.223	0.748	Bechtel-Jacobs (1998)
Selenium	-0.677	1.104	Bechtel-Jacobs (1998)
Zinc	1.575	0.554	Bechtel-Jacobs (1998)
Acenaphthene	-5.562	-0.8556	USEPA (2007)
Acenaphthylene	-1.144	0.791	USEPA (2007)
Anthracene	-0.9887	0.7784	USEPA (2007)
Benzo(a)anthracene	-2.7078	0.5944	USEPA (2007)
Benzo(a)pyrene	-2.0615	0.975	USEPA (2007)
Benzo(g,h,i)perylene	-0.9313	1.1829	USEPA (2007)
Benzo(k)fluoranthene	-2.1579	0.8595	USEPA (2007)
Chrysene	-2.7078	0.5944	USEPA (2007)
Fluorene	-5.562	-0.8556	USEPA (2007)
Phenanthrene	-0.1665	0.6203	USEPA (2007)

b, Soil-to-plant BAF based on K_{ow} model for non-ionic organic compounds (rinsed foliage data) provided in USEPA (2005), where: log BAF = -0.4057(log K_{ow}) + 1.781; log K_{ow} values obtained from EPA EpiSuite V. 1.69, KOWWIN module.

c, Soil-invertebrate bioaccumulation factor could not be identified; therefore, a conservative default accumulation factor of 1.0 was assumed.

d, Soil invertebrate tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-1.421	0.706	Sample et al. (1999)
Cadmium	2.114	0.795	Sample et al. (1999)
Lead	-0.218	0.807	Sample et al. (1999)
Manganese	-0.809	0.682	Sample et al. (1999)
Selenium	-0.075	0.733	Sample et al. (1999)
Zinc	4.449	0.328	Sample et al. (1999)
2,3,7,8-TCDD	3.533	1.182	Sample et al. (1998a)

e, Bioaccumulation factor estimated as the product of the soil-plant and ingestion-beef factors reported in Baes et al. (1984)

f, Median soil-to-plant uptake factors reported in Bechtel (1998a) were used as bioaccumulation factors.

f, Small mammal tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-4.8471	0.8188	Sample et al. (1998b)
Cadmium	-1.2571	0.4723	Sample et al. (1998b)
Chromium	-1.4599	0.7338	Sample et al. (1998b)
Cobalt	-4.4669	1.307	Sample et al. (1998b)
Copper	2.042	0.1444	Sample et al. (1998b)
Lead	0.0761	0.4422	Sample et al. (1998b)
Nickel	-0.2462	0.4658	Sample et al. (1998b)
Selenium	-0.4158	0.3764	Sample et al. (1998b)
Zinc	4.3632	0.0706	Sample et al. (1998b)
2,3,7,8-TCDD	0.8113	1.0993	Sample et al. (1998b)

g, Pentachlorophenol concentration in small mammal tissue (mg/kg dry weight) calculated based on regression models, where [tissue] = 0.198 + 0.00452([$diet_{invertebrate}$])

h, USEPA (2005) assumes bioaccumulation of PAHs by birds and mammals is minimal due to rapid metabolism of these compounds after ingestion.

i, Small mammal tissue estimated based on the medial BAF for the general model presented in Sample et al. (1998b)

j, No value was identified in the literature. Soil-to-small mammal BF estimated based on the approach presented in Table 5, consistent with LANL (2017).

Table H2-2
Screening-Level Exposure Evaluation - American Woodcock
Central Landfills Area
Baseline Ecological Risk Assessment
Columbia Falls Aluminum Company
Columbia Falls, Montana

Analyte	Exposure Point Concentrations (EPCs)		American Woodcock Dose (mg/kg bw-day)

Notes:
a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

signifies special status species, and decisions are made solely on the NOAEL-based HQs.

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

signifies special status species, and decisions are made solely on the NOAEL-based HQs.

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

signifies special status species, and decisions are made solely on the NOAEL-based HQs.

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

signifies special status species, and decisions are made solely on the NOAEL-based HQs.

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

signifies special status species, and decisions are made solely on the NOAEL-based HQs.

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:
a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Table H3-1a
Estimated Concentrations in Dietary Items of Terrestrial Receptors - Industrial Landfill Area (0 - 0.5' Interval)
Baseline Ecological Risk Assessment
Columbia Falls Aluminum Company
Columbia Falls, Montana

Notes:

a, Plant tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]). Slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Antimony	-3.233	0.938	USEPA (2007)
Beryllium	-0.5361	0.7345	USEPA (2007)
Cadmium	-0.475	0.546	Bechtel-Jacobs (1998)
Copper	0.668	0.394	Bechtel-Jacobs (1998)
Lead	-1.328	0.561	Bechtel-Jacobs (1998)
Mercury	-0.996	0.544	Bechtel-Jacobs (1998)
Nickel	-2.223	0.748	Bechtel-Jacobs (1998)
Selenium	-0.677	1.104	Bechtel-Jacobs (1998)
Zinc	1.575	0.554	Bechtel-Jacobs (1998)
Acenaphthene	-5.562	-0.8556	USEPA (2007)
Acenaphthylene	-1.144	0.791	USEPA (2007)
Anthracene	-0.9887	0.7784	USEPA (2007)
Benzo(a)anthracene	-2.7078	0.5944	USEPA (2007)
Benzo(a)pyrene	-2.0615	0.975	USEPA (2007)
Benzo(g,h,i)perylene	-0.9313	1.1829	USEPA (2007)
Benzo(k)fluoranthene	-2.1579	0.8595	USEPA (2007)
Chrysene	-2.7078	0.5944	USEPA (2007)
Fluorene	-5.562	-0.8556	USEPA (2007)
Phenanthrene	-0.1665	0.6203	USEPA (2007)

b, Soil-to-plant BAF based on K_{ow} model for non-ionic organic compounds (rinsed foliage data) provided in USEPA (2005), where: log BAF = -0.4057(log K_{ow}) + 1.781; log K_{ow} values obtained from EPA EpiSuite V. 1.69, KOWWIN module.

c, Soil-invertebrate bioaccumulation factor could not be identified; therefore, a conservative default accumulation factor of 1.0 was assummed.

d, Soil invertebrate tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-1.421	0.706	Sample et al. (1999)
Cadmium	2.114	0.795	Sample et al. (1999)
Lead	-0.218	0.807	Sample et al. (1999)
Manganese	-0.809	0.682	Sample et al. (1999)
Selenium	-0.075	0.733	Sample et al. (1999)
Zinc	4.449	0.328	Sample et al. (1999)
2,3,7,8-TCDD	3.533	1.182	Sample et al. (1998a)

e, Bioaccumulation factor estimated as the product of the soil-plant and ingestion-beef factors reported in Baes et al. (1984)

f, Median soil-to-plant uptake factors reported in Bechtel (1998a) were used as bioaccumulation factors.

f, Small mammal tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-4.8471	0.8188	Sample et al. (1998b)
Cadmium	-1.2571	0.4723	Sample et al. (1998b)
Chromium	-1.4599	0.7338	Sample et al. (1998b)
Cobalt	-4.4669	1.307	Sample et al. (1998b)
Copper	2.042	0.1444	Sample et al. (1998b)
Lead	0.0761	0.4422	Sample et al. (1998b)
Nickel	-0.2462	0.4658	Sample et al. (1998b)
Selenium	-0.4158	0.3764	Sample et al. (1998b)
Zinc	4.3632	0.0706	Sample et al. (1998b)
2,3,7,8-TCDD	0.8113	1.0993	Sample et al. (1998b)

g, Pentachlorophenol concentration in small mammal tissue (mg/kg dry weight) calculated based on regression models, where [tissue] = 0.198 + 0.00452([$diet_{invertebrate}$])

h, USEPA (2005) assumes bioaccumulation of PAHs by birds and mammals is minimal due to rapid metabolism of these compounds after ingestion.

i, Small mammal tissue estimated based on the medial BAF for the general model presented in Sample et al. (1998b)

j, No value was identified in the literature. Soil-to-small mammal BF estimated based on the approach presented in Table 5, consistent with LANL (2017).

Fluorene	-5.562	-0.8556	USEPA (2007)
Phenanthrene	-0.1665	0.6203	USEPA (2007)

b, Soil-to-plant BAF based on K_{ow} model for non-ionic organic compounds (rinsed foliage data) provided in USEPA (2005), where: log BAF = -0.4057(log K_{ow}) + 1.781; log K_{ow} values obtained from EPA EpiSuite V. 1.69, KOWWIN module.

c, Soil-invertebrate bioaccumulation factor could not be identified; therefore, a conservative default accumulation factor of 1.0 was assumed.

d, Soil invertebrate tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-1.421	0.706	Sample et al. (1999)
Cadmium	2.114	0.795	Sample et al. (1999)
Lead	-0.218	0.807	Sample et al. (1999)
Manganese	-0.809	0.682	Sample et al. (1999)
Selenium	-0.075	0.733	Sample et al. (1999)
Zinc	4.449	0.328	Sample et al. (1999)
2,3,7,8-TCDD	3.533	1.182	Sample et al. (1998a)

e, Bioaccumulation factor estimated as the product of the soil-plant and ingestion-beef factors reported in Baes et al. (1984)

f, Median soil-to-plant uptake factors reported in Bechtel (1998a) were used as bioaccumulation factors.

f, Small mammal tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-4.8471	0.8188	Sample et al. (1998b)
Cadmium	-1.2571	0.4723	Sample et al. (1998b)
Chromium	-1.4599	0.7338	Sample et al. (1998b)
Cobalt	-4.4669	1.307	Sample et al. (1998b)
Copper	2.042	0.1444	Sample et al. (1998b)
Lead	0.0761	0.4422	Sample et al. (1998b)
Nickel	-0.2462	0.4658	Sample et al. (1998b)
Selenium	-0.4158	0.3764	Sample et al. (1998b)
Zinc	4.3632	0.0706	Sample et al. (1998b)
2,3,7,8-TCDD	0.8113	1.0993	Sample et al. (1998b)

g, Pentachlorophenol concentration in small mammal tissue (mg/kg dry weight) calculated based on regression models, where [tissue] = 0.198 + 0.00452([$diet_{invertebrate}$])

h, USEPA (2005) assumes bioaccumulation of PAHs by birds and mammals is minimal due to rapid metabolism of these compounds after ingestion.

i, Small mammal tissue estimated based on the medial BAF for the general model presented in Sample et al. (1998b)

j, No value was identified in the literature. Soil-to-small mammal BF estimated based on the approach presented in Table 5, consistent with LANL (2017).

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_S	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

signifies special status species, and decisions are made solely on the NOAEL-based HQs.

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

signifies special status species, and decisions are made solely on the NOAEL-based HQs.

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

signifies special status species, and decisions are made solely on the NOAEL-based HQs.

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

where:

ADD_{diet} = Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet} = Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF = Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$ = COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i = Dietary fraction of food item i (proportion of food type in the diet)
AUF = Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW = Body weight of the receptor, wet weight (kg)

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

where:

$ADD_{substrate}$ = Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s = Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$ = COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

where:

$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

Notes:

signifies special status species, and decisions are made solely on the NOAEL-based HQs.

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Baseline Ecological Risk Assessment
Columbia Falls Aluminum Company
Columbia Falls, Montana

Notes:

a, Plant tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]). Slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Antimony	-3.233	0.938	USEPA (2007)
Beryllium	-0.5361	0.7345	USEPA (2007)
Cadmium	-0.475	0.546	Bechtel-Jacobs (1998)
Copper	0.668	0.394	Bechtel-Jacobs (1998)
Lead	-1.328	0.561	Bechtel-Jacobs (1998)
Mercury	-0.996	0.544	Bechtel-Jacobs (1998)
Nickel	-2.223	0.748	Bechtel-Jacobs (1998)
Selenium	-0.677	1.104	Bechtel-Jacobs (1998)
Zinc	1.575	0.554	Bechtel-Jacobs (1998)
Acenaphthene	-5.562	-0.8556	USEPA (2007)
Acenaphthylene	-1.144	0.791	USEPA (2007)
Anthracene	-0.9887	0.7784	USEPA (2007)
Benzo(a)anthracene	-2.7078	0.5944	USEPA (2007)
Benzo(a)pyrene	-2.0615	0.975	USEPA (2007)
Benzo(g,h,i)perylene	-0.9313	1.1829	USEPA (2007)
Benzo(k)fluoranthene	-2.1579	0.8595	USEPA (2007)
Chrysene	-2.7078	0.5944	USEPA (2007)
Fluorene	-5.562	-0.8556	USEPA (2007)
Phenanthrene	-0.1665	0.6203	USEPA (2007)

b, Soil-to-plant BAF based on K_{ow} model for non-ionic organic compounds (rinsed foliage data) provided in USEPA (2005), where: log BAF = -0.4057(log K_{ow}) + 1.781; log K_{ow} values obtained from EPA EpiSuite V. 1.69, KOWWIN module.

c, Soil-invertebrate bioaccumulation factor could not be identified; therefore, a conservative default accumulation factor of 1.0 was assumed.

d, Soil invertebrate tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-1.421	0.706	Sample et al. (1999)
Cadmium	2.114	0.795	Sample et al. (1999)
Lead	-0.218	0.807	Sample et al. (1999)
Manganese	-0.809	0.682	Sample et al. (1999)
Selenium	-0.075	0.733	Sample et al. (1999)
Zinc	4.449	0.328	Sample et al. (1999)
2,3,7,8-TCDD	3.533	1.182	Sample et al. (1998a)

e, Bioaccumulation factor estimated as the product of the soil-plant and ingestion-beef factors reported in Baes et al. (1984)

f, Median soil-to-plant uptake factors reported in Bechtel (1998a) were used as bioaccumulation factors.

f, Small mammal tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-4.8471	0.8188	Sample et al. (1998b)
Cadmium	-1.2571	0.4723	Sample et al. (1998b)
Chromium	-1.4599	0.7338	Sample et al. (1998b)
Cobalt	-4.4669	1.307	Sample et al. (1998b)
Copper	2.042	0.1444	Sample et al. (1998b)
Lead	0.0761	0.4422	Sample et al. (1998b)
Nickel	-0.2462	0.4658	Sample et al. (1998b)
Selenium	-0.4158	0.3764	Sample et al. (1998b)
Zinc	4.3632	0.0706	Sample et al. (1998b)
2,3,7,8-TCDD	0.8113	1.0993	Sample et al. (1998b)

g, Pentachlorophenol concentration in small mammal tissue (mg/kg dry weight) calculated based on regression models, where [tissue] = 0.198 + 0.00452([$diet_{invertebrate}$])

h, USEPA (2005) assumes bioaccumulation of PAHs by birds and mammals is minimal due to rapid metabolism of these compounds after ingestion.

i, Small mammal tissue estimated based on the medial BAF for the general model presented in Sample et al. (1998b)

j, No value was identified in the literature. Soil-to-small mammal BF estimated based on the approach presented in Table 5, consistent with LANL (2017).

Table H4-1b
Estimated Concentrations in Dietary Items of Terrestrial Receptors - Eastern Undeveloped Area (0 - 2' Interval)
Baseline Ecological Risk Assessment
Columbia Falls Aluminum Company
Columbia Falls, Montana

Notes:

a, Plant tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]). Slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Antimony	-3.233	0.938	USEPA (2007)
Beryllium	-0.5361	0.7345	USEPA (2007)
Cadmium	-0.475	0.546	Bechtel-Jacobs (1998)
Copper	0.668	0.394	Bechtel-Jacobs (1998)
Lead	-1.328	0.561	Bechtel-Jacobs (1998)
Mercury	-0.996	0.544	Bechtel-Jacobs (1998)
Nickel	-2.223	0.748	Bechtel-Jacobs (1998)
Selenium	-0.677	1.104	Bechtel-Jacobs (1998)
Zinc	1.575	0.554	Bechtel-Jacobs (1998)
Acenaphthene	-5.562	-0.8556	USEPA (2007)
Acenaphthylene	-1.144	0.791	USEPA (2007)
Anthracene	-0.9887	0.7784	USEPA (2007)
Benzo(a)anthracene	-2.7078	0.5944	USEPA (2007)
Benzo(a)pyrene	-2.0615	0.975	USEPA (2007)
Benzo(g,h,i)perylene	-0.9313	1.1829	USEPA (2007)
Benzo(k)fluoranthene	-2.1579	0.8595	USEPA (2007)
Chrysene	-2.7078	0.5944	USEPA (2007)
Fluorene	-5.562	-0.8556	USEPA (2007)
Phenanthrene	-0.1665	0.6203	USEPA (2007)

b, Soil-to-plant BAF based on K_{ow} model for non-ionic organic compounds (rinsed foliage data) provided in USEPA (2005), where: log BAF = -0.4057(log K_{ow}) + 1.781; log K_{ow} values obtained from EPA EpiSuite V. 1.69, KOWWIN module.

c, Soil-invertebrate bioaccumulation factor could not be identified; therefore, a conservative default accumulation factor of 1.0 was assumed.

d, Soil invertebrate tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-1.421	0.706	Sample et al. (1999)
Cadmium	2.114	0.795	Sample et al. (1999)
Lead	-0.218	0.807	Sample et al. (1999)
Manganese	-0.809	0.682	Sample et al. (1999)
Selenium	-0.075	0.733	Sample et al. (1999)
Zinc	4.449	0.328	Sample et al. (1999)
2,3,7,8-TCDD	3.533	1.182	Sample et al. (1998a)

e, Bioaccumulation factor estimated as the product of the soil-plant and ingestion-beef factors reported in Baes et al. (1984)

f, Median soil-to-plant uptake factors reported in Bechtel (1998a) were used as bioaccumulation factors.

f, Small mammal tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-4.8471	0.8188	Sample et al. (1998b)
Cadmium	-1.2571	0.4723	Sample et al. (1998b)
Chromium	-1.4599	0.7338	Sample et al. (1998b)
Cobalt	-4.4669	1.307	Sample et al. (1998b)
Copper	2.042	0.1444	Sample et al. (1998b)
Lead	0.0761	0.4422	Sample et al. (1998b)
Nickel	-0.2462	0.4658	Sample et al. (1998b)
Selenium	-0.4158	0.3764	Sample et al. (1998b)
Zinc	4.3632	0.0706	Sample et al. (1998b)
2,3,7,8-TCDD	0.8113	1.0993	Sample et al. (1998b)

g, Pentachlorophenol concentration in small mammal tissue (mg/kg dry weight) calculated based on regression models, where [tissue] = 0.198 + 0.00452([$diet_{invertebrate}$])

h, USEPA (2005) assumes bioaccumulation of PAHs by birds and mammals is minimal due to rapid metabolism of these compounds after ingestion.

i, Small mammal tissue estimated based on the medial BAF for the general model presented in Sample et al. (1998b)

j, No value was identified in the literature. Soil-to-small mammal BF estimated based on the approach presented in Table 5, consistent with LANL (2017).

Notes:
a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

signifies special status species, and decisions are made solely on the NOAEL-based HQs.

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

signifies special status species, and decisions are made solely on the NOAEL-based HQs.

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

signifies special status species, and decisions are made solely on the NOAEL-based HQs.

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

signifies special status species, and decisions are made solely on the NOAEL-based HQs.

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

	ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
	IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
	B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
	$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
	DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
	AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
	BW	= Body weight of the receptor, wet weight (kg)
	$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
	IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
	$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Table H5-1a
Estimated Concentrations in Dietary Items of Terrestrial Receptors - North-Central Undeveloped Area (0 - 0.5' Interval)
Baseline Ecological Risk Assessment
Columbia Falls Aluminum Company
Columbia Falls, Montana

Notes:

a, Plant tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]). Slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Antimony	-3.233	0.938	USEPA (2007)
Beryllium	-0.5361	0.7345	USEPA (2007)
Cadmium	-0.475	0.546	Bechtel-Jacobs (1998)
Copper	0.668	0.394	Bechtel-Jacobs (1998)
Lead	-1.328	0.561	Bechtel-Jacobs (1998)
Mercury	-0.996	0.544	Bechtel-Jacobs (1998)
Nickel	-2.223	0.748	Bechtel-Jacobs (1998)
Selenium	-0.677	1.104	Bechtel-Jacobs (1998)
Zinc	1.575	0.554	Bechtel-Jacobs (1998)
Acenaphthene	-5.562	-0.8556	USEPA (2007)
Acenaphthylene	-1.144	0.791	USEPA (2007)
Anthracene	-0.9887	0.7784	USEPA (2007)
Benzo(a)anthracene	-2.7078	0.5944	USEPA (2007)
Benzo(a)pyrene	-2.0615	0.975	USEPA (2007)
Benzo(g,h,i)perylene	-0.9313	1.1829	USEPA (2007)
Benzo(k)fluoranthene	-2.1579	0.8595	USEPA (2007)
Chrysene	-2.7078	0.5944	USEPA (2007)
Fluorene	-5.562	-0.8556	USEPA (2007)
Phenanthrene	-0.1665	0.6203	USEPA (2007)

b, Soil-to-plant BAF based on K_{ow} model for non-ionic organic compounds (rinsed foliage data) provided in USEPA (2005), where: log BAF = -0.4057(log K_{ow}) + 1.781; log K_{ow} values obtained from EPA EpiSuite V. 1.69, KOWWIN module.

c, Soil-invertebrate bioaccumulation factor could not be identified; therefore, a conservative default accumulation factor of 1.0 was assummed.

d, Soil invertebrate tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-1.421	0.706	Sample et al. (1999)
Cadmium	2.114	0.795	Sample et al. (1999)
Lead	-0.218	0.807	Sample et al. (1999)
Manganese	-0.809	0.682	Sample et al. (1999)
Selenium	-0.075	0.733	Sample et al. (1999)
Zinc	4.449	0.328	Sample et al. (1999)
2,3,7,8-TCDD	3.533	1.182	Sample et al. (1998a)

e, Bioaccumulation factor estimated as the product of the soil-plant and ingestion-beef factors reported in Baes et al. (1984)

f, Median soil-to-plant uptake factors reported in Bechtel (1998a) were used as bioaccumulation factors.

f, Small mammal tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-4.8471	0.8188	Sample et al. (1998b)
Cadmium	-1.2571	0.4723	Sample et al. (1998b)
Chromium	-1.4599	0.7338	Sample et al. (1998b)
Cobalt	-4.4669	1.307	Sample et al. (1998b)
Copper	2.042	0.1444	Sample et al. (1998b)
Lead	0.0761	0.4422	Sample et al. (1998b)
Nickel	-0.2462	0.4658	Sample et al. (1998b)
Selenium	-0.4158	0.3764	Sample et al. (1998b)
Zinc	4.3632	0.0706	Sample et al. (1998b)
2,3,7,8-TCDD	0.8113	1.0993	Sample et al. (1998b)

g, Pentachlorophenol concentration in small mammal tissue (mg/kg dry weight) calculated based on regression models, where [tissue] = 0.198 + 0.00452([diet$_{invertebrate}$])

h, USEPA (2005) assumes bioaccumulation of PAHs by birds and mammals is minimal due to rapid metabolism of these compounds after ingestion.

i, Small mammal tissue estimated based on the medial BAF for the general model presented in Sample et al. (1998b)

j, No value was identified in the literature. Soil-to-small mammal BF estimated based on the approach presented in Table 5, consistent with LANL (2017).

Table H5-1b
Estimated Concentrations in Dietary Items of Terrestrial Receptors - North-Central Undeveloped Area (0 - 2' Interval)
Baseline Ecological Risk Assessment
Columbia Falls Aluminum Company
Columbia Falls, Montana

Notes:

a, Plant tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]). Slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Antimony	-3.233	0.938	USEPA (2007)
Beryllium	-0.5361	0.7345	USEPA (2007)
Cadmium	-0.475	0.546	Bechtel-Jacobs (1998)
Copper	0.668	0.394	Bechtel-Jacobs (1998)
Lead	-1.328	0.561	Bechtel-Jacobs (1998)
Mercury	-0.996	0.544	Bechtel-Jacobs (1998)
Nickel	-2.223	0.748	Bechtel-Jacobs (1998)
Selenium	-0.677	1.104	Bechtel-Jacobs (1998)
Zinc	1.575	0.554	Bechtel-Jacobs (1998)
Acenaphthene	-5.562	-0.8556	USEPA (2007)
Acenaphthylene	-1.144	0.791	USEPA (2007)
Anthracene	-0.9887	0.7784	USEPA (2007)
Benzo(a)anthracene	-2.7078	0.5944	USEPA (2007)
Benzo(a)pyrene	-2.0615	0.975	USEPA (2007)
Benzo(g,h,i)perylene	-0.9313	1.1829	USEPA (2007)
Benzo(k)fluoranthene	-2.1579	0.8595	USEPA (2007)
Chrysene	-2.7078	0.5944	USEPA (2007)
Fluorene	-5.562	-0.8556	USEPA (2007)
Phenanthrene	-0.1665	0.6203	USEPA (2007)

b, Soil-to-plant BAF based on K_{ow} model for non-ionic organic compounds (rinsed foliage data) provided in USEPA (2005), where: log BAF = -0.4057(log K_{ow}) + 1.781; log K_{ow} values obtained from EPA EpiSuite V. 1.69, KOWWIN module.

c, Soil-invertebrate bioaccumulation factor could not be identified; therefore, a conservative default accumulation factor of 1.0 was assumed.

d, Soil invertebrate tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-1.421	0.706	Sample et al. (1999)
Cadmium	2.114	0.795	Sample et al. (1999)
Lead	-0.218	0.807	Sample et al. (1999)
Manganese	-0.809	0.682	Sample et al. (1999)
Selenium	-0.075	0.733	Sample et al. (1999)
Zinc	4.449	0.328	Sample et al. (1999)
2,3,7,8-TCDD	3.533	1.182	Sample et al. (1998a)

e, Bioaccumulation factor estimated as the product of the soil-plant and ingestion-beef factors reported in Baes et al. (1984)

f, Median soil-to-plant uptake factors reported in Bechtel (1998a) were used as bioaccumulation factors.

f, Small mammal tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-4.8471	0.8188	Sample et al. (1998b)
Cadmium	-1.2571	0.4723	Sample et al. (1998b)
Chromium	-1.4599	0.7338	Sample et al. (1998b)
Cobalt	-4.4669	1.307	Sample et al. (1998b)
Copper	2.042	0.1444	Sample et al. (1998b)
Lead	0.0761	0.4422	Sample et al. (1998b)
Nickel	-0.2462	0.4658	Sample et al. (1998b)
Selenium	-0.4158	0.3764	Sample et al. (1998b)
Zinc	4.3632	0.0706	Sample et al. (1998b)
2,3,7,8-TCDD	0.8113	1.0993	Sample et al. (1998b)

g, Pentachlorophenol concentration in small mammal tissue (mg/kg dry weight) calculated based on regression models, where [tissue] = 0.198 + 0.00452([$diet_{invertebrate}$])

h, USEPA (2005) assumes bioaccumulation of PAHs by birds and mammals is minimal due to rapid metabolism of these compounds after ingestion.

i, Small mammal tissue estimated based on the medial BAF for the general model presented in Sample et al. (1998b)

j, No value was identified in the literature. Soil-to-small mammal BF estimated based on the approach presented in Table 5, consistent with LANL (2017).

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

signifies special status species, and decisions are made solely on the NOAEL-based HQs.

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

signifies special status species, and decisions are made solely on the NOAEL-based HQs.

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

signifies special status species, and decisions are made solely on the NOAEL-based HQs.

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

signifies special status species, and decisions are made solely on the NOAEL-based HQs.

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Table H6-1a
Estimated Concentrations in Dietary Items of Terrestrial Receptors - Western Undeveloped Area (0 - 0.5' Interval)
Baseline Ecological Risk Assessment
Columbia Falls Aluminum Company
Columbia Falls, Montana

Notes:

a, Plant tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]). Slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Antimony	-3.233	0.938	USEPA (2007)
Beryllium	-0.5361	0.7345	USEPA (2007)
Cadmium	-0.475	0.546	Bechtel-Jacobs (1998)
Copper	0.668	0.394	Bechtel-Jacobs (1998)
Lead	-1.328	0.561	Bechtel-Jacobs (1998)
Mercury	-0.996	0.544	Bechtel-Jacobs (1998)
Nickel	-2.223	0.748	Bechtel-Jacobs (1998)
Selenium	-0.677	1.104	Bechtel-Jacobs (1998)
Zinc	1.575	0.554	Bechtel-Jacobs (1998)
Acenaphthene	-5.562	-0.8556	USEPA (2007)
Acenaphthylene	-1.144	0.791	USEPA (2007)
Anthracene	-0.9887	0.7784	USEPA (2007)
Benzo(a)anthracene	-2.7078	0.5944	USEPA (2007)
Benzo(a)pyrene	-2.0615	0.975	USEPA (2007)
Benzo(g,h,i)perylene	-0.9313	1.1829	USEPA (2007)
Benzo(k)fluoranthene	-2.1579	0.8595	USEPA (2007)
Chrysene	-2.7078	0.5944	USEPA (2007)
Fluorene	-5.562	-0.8556	USEPA (2007)
Phenanthrene	-0.1665	0.6203	USEPA (2007)

b, Soil-to-plant BAF based on K_{ow} model for non-ionic organic compounds (rinsed foliage data) provided in USEPA (2005), where: log BAF = -0.4057(log K_{ow}) + 1.781; log K_{ow} values obtained from EPA EpiSuite V. 1.69, KOWWIN module.

c, Soil-invertebrate bioaccumulation factor could not be identified; therefore, a conservative default accumulation factor of 1.0 was assummed.

d, Soil invertebrate tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-1.421	0.706	Sample et al. (1999)
Cadmium	2.114	0.795	Sample et al. (1999)
Lead	-0.218	0.807	Sample et al. (1999)
Manganese	-0.809	0.682	Sample et al. (1999)
Selenium	-0.075	0.733	Sample et al. (1999)
Zinc	4.449	0.328	Sample et al. (1999)
2,3,7,8-TCDD	3.533	1.182	Sample et al. (1998a)

e, Bioaccumulation factor estimated as the product of the soil-plant and ingestion-beef factors reported in Baes et al. (1984)

f, Median soil-to-plant uptake factors reported in Bechtel (1998a) were used as bioaccumulation factors.

f, Small mammal tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-4.8471	0.8188	Sample et al. (1998b)
Cadmium	-1.2571	0.4723	Sample et al. (1998b)
Chromium	-1.4599	0.7338	Sample et al. (1998b)
Cobalt	-4.4669	1.307	Sample et al. (1998b)
Copper	2.042	0.1444	Sample et al. (1998b)
Lead	0.0761	0.4422	Sample et al. (1998b)
Nickel	-0.2462	0.4658	Sample et al. (1998b)
Selenium	-0.4158	0.3764	Sample et al. (1998b)
Zinc	4.3632	0.0706	Sample et al. (1998b)
2,3,7,8-TCDD	0.8113	1.0993	Sample et al. (1998b)

g, Pentachlorophenol concentration in small mammal tissue (mg/kg dry weight) calculated based on regression models, where [tissue] = 0.198 + 0.00452([diet$_{invertebrate}$])

h, USEPA (2005) assumes bioaccumulation of PAHs by birds and mammals is minimal due to rapid metabolism of these compounds after ingestion.

i, Small mammal tissue estimated based on the medial BAF for the general model presented in Sample et al. (1998b)

j, No value was identified in the literature. Soil-to-small mammal BF estimated based on the approach presented in Table 5, consistent with LANL (2017).

Table H6-1b
Estimated Concentrations in Dietary Items of Terrestrial Receptors - Western Undeveloped Area (0 - 2' Interval)
Baseline Ecological Risk Assessment
Columbia Falls Aluminum Company
Columbia Falls, Montana

Notes:

a, Plant tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]). Slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Antimony	-3.233	0.938	USEPA (2007)
Beryllium	-0.5361	0.7345	USEPA (2007)
Cadmium	-0.475	0.546	Bechtel-Jacobs (1998)
Copper	0.668	0.394	Bechtel-Jacobs (1998)
Lead	-1.328	0.561	Bechtel-Jacobs (1998)
Mercury	-0.996	0.544	Bechtel-Jacobs (1998)
Nickel	-2.223	0.748	Bechtel-Jacobs (1998)
Selenium	-0.677	1.104	Bechtel-Jacobs (1998)
Zinc	1.575	0.554	Bechtel-Jacobs (1998)
Acenaphthene	-5.562	-0.8556	USEPA (2007)
Acenaphthylene	-1.144	0.791	USEPA (2007)
Anthracene	-0.9887	0.7784	USEPA (2007)
Benzo(a)anthracene	-2.7078	0.5944	USEPA (2007)
Benzo(a)pyrene	-2.0615	0.975	USEPA (2007)
Benzo(g,h,i)perylene	-0.9313	1.1829	USEPA (2007)
Benzo(k)fluoranthene	-2.1579	0.8595	USEPA (2007)
Chrysene	-2.7078	0.5944	USEPA (2007)
Fluorene	-5.562	-0.8556	USEPA (2007)
Phenanthrene	-0.1665	0.6203	USEPA (2007)

b, Soil-to-plant BAF based on K_{ow} model for non-ionic organic compounds (rinsed foliage data) provided in USEPA (2005), where: log BAF = -0.4057(log K_{ow}) + 1.781; log K_{ow} values obtained from EPA EpiSuite V. 1.69, KOWWIN module.

c, Soil-invertebrate bioaccumulation factor could not be identified; therefore, a conservative default accumulation factor of 1.0 was assumed.

d, Soil invertebrate tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-1.421	0.706	Sample et al. (1999)
Cadmium	2.114	0.795	Sample et al. (1999)
Lead	-0.218	0.807	Sample et al. (1999)
Manganese	-0.809	0.682	Sample et al. (1999)
Selenium	-0.075	0.733	Sample et al. (1999)
Zinc	4.449	0.328	Sample et al. (1999)
2,3,7,8-TCDD	3.533	1.182	Sample et al. (1998a)

e, Bioaccumulation factor estimated as the product of the soil-plant and ingestion-beef factors reported in Baes et al. (1984)

f, Median soil-to-plant uptake factors reported in Bechtel (1998a) were used as bioaccumulation factors.

f, Small mammal tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-4.8471	0.8188	Sample et al. (1998b)
Cadmium	-1.2571	0.4723	Sample et al. (1998b)
Chromium	-1.4599	0.7338	Sample et al. (1998b)
Cobalt	-4.4669	1.307	Sample et al. (1998b)
Copper	2.042	0.1444	Sample et al. (1998b)
Lead	0.0761	0.4422	Sample et al. (1998b)
Nickel	-0.2462	0.4658	Sample et al. (1998b)
Selenium	-0.4158	0.3764	Sample et al. (1998b)
Zinc	4.3632	0.0706	Sample et al. (1998b)
2,3,7,8-TCDD	0.8113	1.0993	Sample et al. (1998b)

g, Pentachlorophenol concentration in small mammal tissue (mg/kg dry weight) calculated based on regression models, where [tissue] = 0.198 + 0.00452([$diet_{invertebrate}$])

h, USEPA (2005) assumes bioaccumulation of PAHs by birds and mammals is minimal due to rapid metabolism of these compounds after ingestion.

i, Small mammal tissue estimated based on the medial BAF for the general model presented in Sample et al. (1998b)

j, No value was identified in the literature. Soil-to-small mammal BF estimated based on the approach presented in Table 5, consistent with LANL (2017).

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

signifies special status species, and decisions are made solely on the NOAEL-based HQs.

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

signifies special status species, and decisions are made solely on the NOAEL-based HQs.

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

signifies special status species, and decisions are made solely on the NOAEL-based HQs.

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

signifies special status species, and decisions are made solely on the NOAEL-based HQs.

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Plant tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]). Slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Antimony	-3.233	0.938	USEPA (2007)
Beryllium	-0.5361	0.7345	USEPA (2007)
Cadmium	-0.475	0.546	Bechtel-Jacobs (1998)
Copper	0.668	0.394	Bechtel-Jacobs (1998)
Lead	-1.328	0.561	Bechtel-Jacobs (1998)
Mercury	-0.996	0.544	Bechtel-Jacobs (1998)
Nickel	-2.223	0.748	Bechtel-Jacobs (1998)
Selenium	-0.677	1.104	Bechtel-Jacobs (1998)
Zinc	1.575	0.554	Bechtel-Jacobs (1998)
Acenaphthene	-5.562	-0.8556	USEPA (2007)
Acenaphthylene	-1.144	0.791	USEPA (2007)
Anthracene	-0.9887	0.7784	USEPA (2007)
Benzo(a)anthracene	-2.7078	0.5944	USEPA (2007)
Benzo(a)pyrene	-2.0615	0.975	USEPA (2007)
Benzo(g,h,i)perylene	-0.9313	1.1829	USEPA (2007)
Benzo(k)fluoranthene	-2.1579	0.8595	USEPA (2007)
Chrysene	-2.7078	0.5944	USEPA (2007)
Fluorene	-5.562	-0.8556	USEPA (2007)
Phenanthrene	-0.1665	0.6203	USEPA (2007)

b, Soil-to-plant BAF based on K_{ow} model for non-ionic organic compounds (rinsed foliage data) provided in USEPA (2005), where: log BAF = -0.4057(log K_{ow}) + 1.781; log K_{ow} values obtained from EPA EpiSuite V. 1.69, KOWWIN module.

c, Soil-invertebrate bioaccumulation factor could not be identified; therefore, a conservative default accumulation factor of 1.0 was assumed.

d, Soil invertebrate tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-1.421	0.706	Sample et al. (1999)
Cadmium	2.114	0.795	Sample et al. (1999)
Lead	-0.218	0.807	Sample et al. (1999)
Manganese	-0.809	0.682	Sample et al. (1999)
Selenium	-0.075	0.733	Sample et al. (1999)
Zinc	4.449	0.328	Sample et al. (1999)
2,3,7,8-TCDD	3.533	1.182	Sample et al. (1998a)

e, Bioaccumulation factor estimated as the product of the soil-plant and ingestion-beef factors reported in Baes et al. (1984)

f, Median soil-to-plant uptake factors reported in Bechtel (1998a) were used as bioaccumulation factors.

f, Small mammal tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-4.8471	0.8188	Sample et al. (1998b)

Zinc	4.3632	0.0706	Sample et al. (1998b)
2,3,7,8-TCDD	0.8113	1.0993	Sample et al. (1998b)

g, Pentachlorophenol concentration in small mammal tissue (mg/kg dry weight) calculated based on regression models, where [tissue] = 0.198 + 0.00452([diet$_{invertebrate}$])

h, USEPA (2005) assumes bioaccumulation of PAHs by birds and mammals is minimal due to rapid metabolism of these compounds after ingestion.

i, Small mammal tissue estimated based on the medial BAF for the general model presented in Sample et al. (1998b)

j, No value was identified in the literature. Soil-to-small mammal BF estimated based on the approach presented in Table 5, consistent with LANL (2017).

Notes:

a, Plant tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]). Slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Antimony	-3.233	0.938	USEPA (2007)
Beryllium	-0.5361	0.7345	USEPA (2007)
Cadmium	-0.475	0.546	Bechtel-Jacobs (1998)
Copper	0.668	0.394	Bechtel-Jacobs (1998)
Lead	-1.328	0.561	Bechtel-Jacobs (1998)
Mercury	-0.996	0.544	Bechtel-Jacobs (1998)
Nickel	-2.223	0.748	Bechtel-Jacobs (1998)
Selenium	-0.677	1.104	Bechtel-Jacobs (1998)
Zinc	1.575	0.554	Bechtel-Jacobs (1998)
Acenaphthene	-5.562	-0.8556	USEPA (2007)
Acenaphthylene	-1.144	0.791	USEPA (2007)
Anthracene	-0.9887	0.7784	USEPA (2007)
Benzo(a)anthracene	-2.7078	0.5944	USEPA (2007)
Benzo(a)pyrene	-2.0615	0.975	USEPA (2007)
Benzo(g,h,i)perylene	-0.9313	1.1829	USEPA (2007)
Benzo(k)fluoranthene	-2.1579	0.8595	USEPA (2007)
Chrysene	-2.7078	0.5944	USEPA (2007)
Fluorene	-5.562	-0.8556	USEPA (2007)
Phenanthrene	-0.1665	0.6203	USEPA (2007)

b, Soil-to-plant BAF based on K_{ow} model for non-ionic organic compounds (rinsed foliage data) provided in USEPA (2005), where: log BAF = -0.4057(log K_{ow}) + 1.781; log K_{ow} values obtained from EPA EpiSuite V. 1.69, KOWWIN module.

c, Soil-invertebrate bioaccumulation factor could not be identified; therefore, a conservative default accumulation factor of 1.0 was assumed.

d, Soil invertebrate tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-1.421	0.706	Sample et al. (1999)
Cadmium	2.114	0.795	Sample et al. (1999)
Lead	-0.218	0.807	Sample et al. (1999)
Manganese	-0.809	0.682	Sample et al. (1999)
Selenium	-0.075	0.733	Sample et al. (1999)
Zinc	4.449	0.328	Sample et al. (1999)
2,3,7,8-TCDD	3.533	1.182	Sample et al. (1998a)

e, Bioaccumulation factor estimated as the product of the soil-plant and ingestion-beef factors reported in Baes et al. (1984)

f, Median soil-to-plant uptake factors reported in Bechtel (1998a) were used as bioaccumulation factors.

f, Small mammal tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-4.8471	0.8188	Sample et al. (1998b)
Cadmium	-1.2571	0.4723	Sample et al. (1998b)
Chromium	-1.4599	0.7338	Sample et al. (1998b)
Cobalt	-4.4669	1.307	Sample et al. (1998b)
Copper	2.042	0.1444	Sample et al. (1998b)
Lead	0.0761	0.4422	Sample et al. (1998b)
Nickel	-0.2462	0.4658	Sample et al. (1998b)
Selenium	-0.4158	0.3764	Sample et al. (1998b)
Zinc	4.3632	0.0706	Sample et al. (1998b)
2,3,7,8-TCDD	0.8113	1.0993	Sample et al. (1998b)

g, Pentachlorophenol concentration in small mammal tissue (mg/kg dry weight) calculated based on regression models, where [tissue] = 0.198 + 0.00452([$diet_{invertebrate}$])

h, USEPA (2005) assumes bioaccumulation of PAHs by birds and mammals is minimal due to rapid metabolism of these compounds after ingestion.

i, Small mammal tissue estimated based on the medial BAF for the general model presented in Sample et al. (1998b)

j, No value was identified in the literature. Soil-to-small mammal BF estimated based on the approach presented in Table 5, consistent with LANL (2017).

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

signifies special status species, and decisions are made solely on the NOAEL-based HQs.

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

signifies special status species, and decisions are made solely on the NOAEL-based HQs.

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Baseline Ecological Risk Assessment
Columbia Falls Aluminum Company
Columbia Falls, Montana

Notes:

a, Plant tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]). Slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Antimony	-3.233	0.938	USEPA (2007)
Beryllium	-0.5361	0.7345	USEPA (2007)
Cadmium	-0.475	0.546	Bechtel-Jacobs (1998)
Copper	0.668	0.394	Bechtel-Jacobs (1998)
Lead	-1.328	0.561	Bechtel-Jacobs (1998)
Mercury	-0.996	0.544	Bechtel-Jacobs (1998)
Nickel	-2.223	0.748	Bechtel-Jacobs (1998)
Selenium	-0.677	1.104	Bechtel-Jacobs (1998)
Zinc	1.575	0.554	Bechtel-Jacobs (1998)
Acenaphthene	-5.562	-0.8556	USEPA (2007)
Acenaphthylene	-1.144	0.791	USEPA (2007)
Anthracene	-0.9887	0.7784	USEPA (2007)
Benzo(a)anthracene	-2.7078	0.5944	USEPA (2007)
Benzo(a)pyrene	-2.0615	0.975	USEPA (2007)
Benzo(g,h,i)perylene	-0.9313	1.1829	USEPA (2007)
Benzo(k)fluoranthene	-2.1579	0.8595	USEPA (2007)
Chrysene	-2.7078	0.5944	USEPA (2007)
Fluorene	-5.562	-0.8556	USEPA (2007)
Phenanthrene	-0.1665	0.6203	USEPA (2007)

b, Soil-to-plant BAF based on K_{ow} model for non-ionic organic compounds (rinsed foliage data) provided in USEPA (2005), where: log BAF = -0.4057(log K_{ow}) + 1.781; log K_{ow} values obtained from EPA EpiSuite V. 1.69, KOWWIN module.

c, Soil-invertebrate bioaccumulation factor could not be identified; therefore, a conservative default accumulation factor of 1.0 was assumed.

d, Soil invertebrate tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-1.421	0.706	Sample et al. (1999)
Cadmium	2.114	0.795	Sample et al. (1999)
Lead	-0.218	0.807	Sample et al. (1999)
Manganese	-0.809	0.682	Sample et al. (1999)
Selenium	-0.075	0.733	Sample et al. (1999)
Zinc	4.449	0.328	Sample et al. (1999)
2,3,7,8-TCDD	3.533	1.182	Sample et al. (1998a)

e, Bioaccumulation factor estimated as the product of the soil-plant and ingestion-beef factors reported in Baes et al. (1984)

f, Median soil-to-plant uptake factors reported in Bechtel (1998a) were used as bioaccumulation factors.

f, Small mammal tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-4.8471	0.8188	Sample et al. (1998b)
Cadmium	-1.2571	0.4723	Sample et al. (1998b)
Chromium	-1.4599	0.7338	Sample et al. (1998b)
Cobalt	-4.4669	1.307	Sample et al. (1998b)
Copper	2.042	0.1444	Sample et al. (1998b)
Lead	0.0761	0.4422	Sample et al. (1998b)
Nickel	-0.2462	0.4658	Sample et al. (1998b)
Selenium	-0.4158	0.3764	Sample et al. (1998b)
Zinc	4.3632	0.0706	Sample et al. (1998b)
2,3,7,8-TCDD	0.8113	1.0993	Sample et al. (1998b)

g, Pentachlorophenol concentration in small mammal tissue (mg/kg dry weight) calculated based on regression models, where [tissue] = 0.198 + 0.00452([diet$_{invertebrate}$])

h, USEPA (2005) assumes bioaccumulation of PAHs by birds and mammals is minimal due to rapid metabolism of these compounds after ingestion.

i, Small mammal tissue estimated based on the medial BAF for the general model presented in Sample et al. (1998b)

j, No value was identified in the literature. Soil-to-small mammal BF estimated based on the approach presented in Table 5, consistent with LANL (2017).

Table H8-1b
Estimated Concentrations in Dietary Items of Terrestrial Receptors - North Percolation Pond Area (0 - 2' Interval)
Baseline Ecological Risk Assessment
Columbia Falls Aluminum Company
Columbia Falls, Montana

Notes:

a, Plant tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]). Slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Antimony	-3.233	0.938	USEPA (2007)
Beryllium	-0.5361	0.7345	USEPA (2007)
Cadmium	-0.475	0.546	Bechtel-Jacobs (1998)
Copper	0.668	0.394	Bechtel-Jacobs (1998)
Lead	-1.328	0.561	Bechtel-Jacobs (1998)
Mercury	-0.996	0.544	Bechtel-Jacobs (1998)
Nickel	-2.223	0.748	Bechtel-Jacobs (1998)
Selenium	-0.677	1.104	Bechtel-Jacobs (1998)
Zinc	1.575	0.554	Bechtel-Jacobs (1998)
Acenaphthene	-5.562	-0.8556	USEPA (2007)
Acenaphthylene	-1.144	0.791	USEPA (2007)
Anthracene	-0.9887	0.7784	USEPA (2007)
Benzo(a)anthracene	-2.7078	0.5944	USEPA (2007)
Benzo(a)pyrene	-2.0615	0.975	USEPA (2007)
Benzo(g,h,i)perylene	-0.9313	1.1829	USEPA (2007)
Benzo(k)fluoranthene	-2.1579	0.8595	USEPA (2007)
Chrysene	-2.7078	0.5944	USEPA (2007)
Fluorene	-5.562	-0.8556	USEPA (2007)
Phenanthrene	-0.1665	0.6203	USEPA (2007)

b, Soil-to-plant BAF based on K_{ow} model for non-ionic organic compounds (rinsed foliage data) provided in USEPA (2005), where: log BAF = -0.4057(log K_{ow}) + 1.781; log K_{ow} values obtained from EPA EpiSuite V. 1.69, KOWWIN module.

c, Soil-invertebrate bioaccumulation factor could not be identified; therefore, a conservative default accumulation factor of 1.0 was assumed.

d, Soil invertebrate tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-1.421	0.706	Sample et al. (1999)
Cadmium	2.114	0.795	Sample et al. (1999)
Lead	-0.218	0.807	Sample et al. (1999)
Manganese	-0.809	0.682	Sample et al. (1999)
Selenium	-0.075	0.733	Sample et al. (1999)
Zinc	4.449	0.328	Sample et al. (1999)
2,3,7,8-TCDD	3.533	1.182	Sample et al. (1998a)

e, Bioaccumulation factor estimated as the product of the soil-plant and ingestion-beef factors reported in Baes et al. (1984)

f, Median soil-to-plant uptake factors reported in Bechtel (1998a) were used as bioaccumulation factors.

f, Small mammal tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-4.8471	0.8188	Sample et al. (1998b)
Cadmium	-1.2571	0.4723	Sample et al. (1998b)
Chromium	-1.4599	0.7338	Sample et al. (1998b)
Cobalt	-4.4669	1.307	Sample et al. (1998b)
Copper	2.042	0.1444	Sample et al. (1998b)
Lead	0.0761	0.4422	Sample et al. (1998b)
Nickel	-0.2462	0.4658	Sample et al. (1998b)
Selenium	-0.4158	0.3764	Sample et al. (1998b)
Zinc	4.3632	0.0706	Sample et al. (1998b)
2,3,7,8-TCDD	0.8113	1.0993	Sample et al. (1998b)

g, Pentachlorophenol concentration in small mammal tissue (mg/kg dry weight) calculated based on regression models, where [tissue] = 0.198 + 0.00452([$diet_{invertebrate}$])

h, USEPA (2005) assumes bioaccumulation of PAHs by birds and mammals is minimal due to rapid metabolism of these compounds after ingestion.

i, Small mammal tissue estimated based on the medial BAF for the general model presented in Sample et al. (1998b)

j, No value was identified in the literature. Soil-to-small mammal BF estimated based on the approach presented in Table 5, consistent with LANL (2017).

Notes:
NA, Normalized BSAF was not applicable for metals
a, Normalized BSAF (kg OC / kg lipid) calculated based on K_{ow}, where BSAF = $K_{ow}^{-0.038}$ (DiToro and McGrath 2000)
b, For non-ionic organic constituents, dry weight BSAF calculated from sediment organic carbon and lipid normalized BSAF as follows:

$$BSAF_{dry\ weight} = BSAF_{norm} \times f_{lip;id} \times \frac{1}{f_{oc}}$$

where: $BSAF_{norm}$ = Normalized BSAF (kg OC/kg lipid)
f_{lipid} = Fraction of lipids in prey item expressed on a dry weight basis (0.065, invertebrates; 0.08, fish)
f_{oc} = Fraction of sediment organic carbon expressed on a dry weight basis (0.01 or 1%)
c, Median BSAF for non-depurated invertebrates determined by Bechtel-Jacobs (1998b)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Table H8-7
Screening-Level Exposure Evaluation - Red-tailed Hawk

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

signifies special status species, and decisions are made solely on the NOAEL-based HQs.

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

signifies special status species, and decisions are made solely on the NOAEL-based HQs.

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

signifies special status species, and decisions are made solely on the NOAEL-based HQs.

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

signifies special status species, and decisions are made solely on the NOAEL-based HQs.

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Baseline Ecological Risk Assessment
Columbia Falls Aluminum Company
Columbia Falls, Montana

Notes:

a, Plant tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]). Slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Antimony	-3.233	0.938	USEPA (2007)
Beryllium	-0.5361	0.7345	USEPA (2007)
Cadmium	-0.475	0.546	Bechtel-Jacobs (1998)
Copper	0.668	0.394	Bechtel-Jacobs (1998)
Lead	-1.328	0.561	Bechtel-Jacobs (1998)
Mercury	-0.996	0.544	Bechtel-Jacobs (1998)
Nickel	-2.223	0.748	Bechtel-Jacobs (1998)
Selenium	-0.677	1.104	Bechtel-Jacobs (1998)
Zinc	1.575	0.554	Bechtel-Jacobs (1998)
Acenaphthene	-5.562	-0.8556	USEPA (2007)
Acenaphthylene	-1.144	0.791	USEPA (2007)
Anthracene	-0.9887	0.7784	USEPA (2007)
Benzo(a)anthracene	-2.7078	0.5944	USEPA (2007)
Benzo(a)pyrene	-2.0615	0.975	USEPA (2007)
Benzo(g,h,i)perylene	-0.9313	1.1829	USEPA (2007)
Benzo(k)fluoranthene	-2.1579	0.8595	USEPA (2007)
Chrysene	-2.7078	0.5944	USEPA (2007)
Fluorene	-5.562	-0.8556	USEPA (2007)
Phenanthrene	-0.1665	0.6203	USEPA (2007)

b, Soil-to-plant BAF based on K_{ow} model for non-ionic organic compounds (rinsed foliage data) provided in USEPA (2005), where: log BAF = -0.4057(log K_{ow}) + 1.781; log K_{ow} values obtained from EPA EpiSuite V. 1.69, KOWWIN module.

c, Soil-invertebrate bioaccumulation factor could not be identified; therefore, a conservative default accumulation factor of 1.0 was assumed.

d, Soil invertebrate tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-1.421	0.706	Sample et al. (1999)
Cadmium	2.114	0.795	Sample et al. (1999)
Lead	-0.218	0.807	Sample et al. (1999)
Manganese	-0.809	0.682	Sample et al. (1999)
Selenium	-0.075	0.733	Sample et al. (1999)
Zinc	4.449	0.328	Sample et al. (1999)
2,3,7,8-TCDD	3.533	1.182	Sample et al. (1998a)

e, Bioaccumulation factor estimated as the product of the soil-plant and ingestion-beef factors reported in Baes et al. (1984)

f, Median soil-to-plant uptake factors reported in Bechtel (1998a) were used as bioaccumulation factors.

f, Small mammal tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-4.8471	0.8188	Sample et al. (1998b)
Cadmium	-1.2571	0.4723	Sample et al. (1998b)
Chromium	-1.4599	0.7338	Sample et al. (1998b)
Cobalt	-4.4669	1.307	Sample et al. (1998b)
Copper	2.042	0.1444	Sample et al. (1998b)
Lead	0.0761	0.4422	Sample et al. (1998b)
Nickel	-0.2462	0.4658	Sample et al. (1998b)
Selenium	-0.4158	0.3764	Sample et al. (1998b)
Zinc	4.3632	0.0706	Sample et al. (1998b)
2,3,7,8-TCDD	0.8113	1.0993	Sample et al. (1998b)

g, Pentachlorophenol concentration in small mammal tissue (mg/kg dry weight) calculated based on regression models, where [tissue] = 0.198 + 0.00452([$diet_{invertebrate}$])

h, USEPA (2005) assumes bioaccumulation of PAHs by birds and mammals is minimal due to rapid metabolism of these compounds after ingestion.

i, Small mammal tissue estimated based on the medial BAF for the general model presented in Sample et al. (1998b)

j, No value was identified in the literature. Soil-to-small mammal BF estimated based on the approach presented in Table 5, consistent with LANL (2017).

Table H9-1b
Estimated Concentrations in Dietary Items of Terrestrial Receptors - South Percolation Pond Area (0 - 2' Interval)
Baseline Ecological Risk Assessment
Columbia Falls Aluminum Company
Columbia Falls, Montana

Notes:

a, Plant tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]). Slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Antimony	-3.233	0.938	USEPA (2007)
Beryllium	-0.5361	0.7345	USEPA (2007)
Cadmium	-0.475	0.546	Bechtel-Jacobs (1998)
Copper	0.668	0.394	Bechtel-Jacobs (1998)
Lead	-1.328	0.561	Bechtel-Jacobs (1998)
Mercury	-0.996	0.544	Bechtel-Jacobs (1998)
Nickel	-2.223	0.748	Bechtel-Jacobs (1998)
Selenium	-0.677	1.104	Bechtel-Jacobs (1998)
Zinc	1.575	0.554	Bechtel-Jacobs (1998)
Acenaphthene	-5.562	-0.8556	USEPA (2007)
Acenaphthylene	-1.144	0.791	USEPA (2007)
Anthracene	-0.9887	0.7784	USEPA (2007)
Benzo(a)anthracene	-2.7078	0.5944	USEPA (2007)
Benzo(a)pyrene	-2.0615	0.975	USEPA (2007)
Benzo(g,h,i)perylene	-0.9313	1.1829	USEPA (2007)
Benzo(k)fluoranthene	-2.1579	0.8595	USEPA (2007)
Chrysene	-2.7078	0.5944	USEPA (2007)
Fluorene	-5.562	-0.8556	USEPA (2007)
Phenanthrene	-0.1665	0.6203	USEPA (2007)

b, Soil-to-plant BAF based on K_{ow} model for non-ionic organic compounds (rinsed foliage data) provided in USEPA (2005), where: log BAF = -0.4057(log K_{ow}) + 1.781; log K_{ow} values obtained from EPA EpiSuite V. 1.69, KOWWIN module.

c, Soil-invertebrate bioaccumulation factor could not be identified; therefore, a conservative default accumulation factor of 1.0 was assumed.

d, Soil invertebrate tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-1.421	0.706	Sample et al. (1999)
Cadmium	2.114	0.795	Sample et al. (1999)
Lead	-0.218	0.807	Sample et al. (1999)
Manganese	-0.809	0.682	Sample et al. (1999)
Selenium	-0.075	0.733	Sample et al. (1999)
Zinc	4.449	0.328	Sample et al. (1999)
2,3,7,8-TCDD	3.533	1.182	Sample et al. (1998a)

e, Bioaccumulation factor estimated as the product of the soil-plant and ingestion-beef factors reported in Baes et al. (1984)

f, Median soil-to-plant uptake factors reported in Bechtel (1998a) were used as bioaccumulation factors.

f, Small mammal tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-4.8471	0.8188	Sample et al. (1998b)
Cadmium	-1.2571	0.4723	Sample et al. (1998b)
Chromium	-1.4599	0.7338	Sample et al. (1998b)
Cobalt	-4.4669	1.307	Sample et al. (1998b)
Copper	2.042	0.1444	Sample et al. (1998b)
Lead	0.0761	0.4422	Sample et al. (1998b)
Nickel	-0.2462	0.4658	Sample et al. (1998b)
Selenium	-0.4158	0.3764	Sample et al. (1998b)
Zinc	4.3632	0.0706	Sample et al. (1998b)
2,3,7,8-TCDD	0.8113	1.0993	Sample et al. (1998b)

g, Pentachlorophenol concentration in small mammal tissue (mg/kg dry weight) calculated based on regression models, where [tissue] = 0.198 + 0.00452([$diet_{invertebrate}$])

h, USEPA (2005) assumes bioaccumulation of PAHs by birds and mammals is minimal due to rapid metabolism of these compounds after ingestion.

i, Small mammal tissue estimated based on the medial BAF for the general model presented in Sample et al. (1998b)

j, No value was identified in the literature. Soil-to-small mammal BF estimated based on the approach presented in Table 5, consistent with LANL (2017).

Notes:
NA, Normalized BSAF was not applicable for metals
a, Normalized BSAF (kg OC / kg lipid) calculated based on K_{ow}, where BSAF = $K_{ow}^{-0.038}$ (DiToro and McGrath 2000)
b, For non-ionic organic constituents, dry weight BSAF calculated from sediment organic carbon and lipid normalized BSAF as follows:

$$BSAF_{dry\ weight} = BSAF_{norm} \times f_{lip;id} \times \frac{1}{f_{oc}}$$

where: $BSAF_{norm}$ = Normalized BSAF (kg OC/kg lipid)
f_{lipid} = Fraction of lipids in prey item expressed on a dry weight basis (0.065, invertebrates; 0.08, fish)
f_{oc} = Fraction of sediment organic carbon expressed on a dry weight basis (0.01 or 1%)
c, Median BSAF for non-depurated invertebrates determined by Bechtel-Jacobs (1998b)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

signifies special status species, and decisions are made solely on the NOAEL-based HQs.

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

signifies special status species, and decisions are made solely on the NOAEL-based HQs.

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

signifies special status species, and decisions are made solely on the NOAEL-based HQs.

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

signifies special status species, and decisions are made solely on the NOAEL-based HQs.

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Fluorene	-5.562	-0.8556	USEPA (2007)
Phenanthrene	-0.1665	0.6203	USEPA (2007)

b, Soil-to-plant BAF based on K_{ow} model for non-ionic organic compounds (rinsed foliage data) provided in USEPA (2005), where: log BAF = -0.4057(log K_{ow}) + 1.781; log K_{ow} values obtained from EPA EpiSuite V. 1.69, KOWWIN module.

c, Soil-invertebrate bioaccumulation factor could not be identified; therefore, a conservative default accumulation factor of 1.0 was assumed.

d, Soil invertebrate tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-1.421	0.706	Sample et al. (1999)
Cadmium	2.114	0.795	Sample et al. (1999)
Lead	-0.218	0.807	Sample et al. (1999)
Manganese	-0.809	0.682	Sample et al. (1999)
Selenium	-0.075	0.733	Sample et al. (1999)
Zinc	4.449	0.328	Sample et al. (1999)
2,3,7,8-TCDD	3.533	1.182	Sample et al. (1998a)

e, Bioaccumulation factor estimated as the product of the soil-plant and ingestion-beef factors reported in Baes et al. (1984)

f, Median soil-to-plant uptake factors reported in Bechtel (1998a) were used as bioaccumulation factors.

f, Small mammal tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-4.8471	0.8188	Sample et al. (1998b)
Cadmium	-1.2571	0.4723	Sample et al. (1998b)
Chromium	-1.4599	0.7338	Sample et al. (1998b)
Cobalt	-4.4669	1.307	Sample et al. (1998b)
Copper	2.042	0.1444	Sample et al. (1998b)
Lead	0.0761	0.4422	Sample et al. (1998b)
Nickel	-0.2462	0.4658	Sample et al. (1998b)
Selenium	-0.4158	0.3764	Sample et al. (1998b)
Zinc	4.3632	0.0706	Sample et al. (1998b)
2,3,7,8-TCDD	0.8113	1.0993	Sample et al. (1998b)

g, Pentachlorophenol concentration in small mammal tissue (mg/kg dry weight) calculated based on regression models, where [tissue] = 0.198 + 0.00452([diet$_{invertebrate}$])

h, USEPA (2005) assumes bioaccumulation of PAHs by birds and mammals is minimal due to rapid metabolism of these compounds after ingestion.

i, Small mammal tissue estimated based on the medial BAF for the general model presented in Sample et al. (1998b)

j, No value was identified in the literature. Soil-to-small mammal BF estimated based on the approach presented in Table 5, consistent with LANL (2017).

Benzo(g,h,i)perylene	-0.9313	1.1829	USEPA (2007)
Benzo(k)fluoranthene	-2.1579	0.8595	USEPA (2007)
Chrysene	-2.7078	0.5944	USEPA (2007)
Fluorene	-5.562	-0.8556	USEPA (2007)
Phenanthrene	-0.1665	0.6203	USEPA (2007)

b, Soil-to-plant BAF based on K_{ow} model for non-ionic organic compounds (rinsed foliage data) provided in USEPA (2005), where: log BAF = -0.4057(log K_{ow}) + 1.781; log K_{ow} values obtained from EPA EpiSuite V. 1.69, KOWWIN module.

c, Soil-invertebrate bioaccumulation factor could not be identified; therefore, a conservative default accumulation factor of 1.0 was assumed.

d, Soil invertebrate tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-1.421	0.706	Sample et al. (1999)
Cadmium	2.114	0.795	Sample et al. (1999)
Lead	-0.218	0.807	Sample et al. (1999)
Manganese	-0.809	0.682	Sample et al. (1999)
Selenium	-0.075	0.733	Sample et al. (1999)
Zinc	4.449	0.328	Sample et al. (1999)
2,3,7,8-TCDD	3.533	1.182	Sample et al. (1998a)

e, Bioaccumulation factor estimated as the product of the soil-plant and ingestion-beef factors reported in Baes et al. (1984)

f, Median soil-to-plant uptake factors reported in Bechtel (1998a) were used as bioaccumulation factors.

f, Small mammal tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-4.8471	0.8188	Sample et al. (1998b)
Cadmium	-1.2571	0.4723	Sample et al. (1998b)
Chromium	-1.4599	0.7338	Sample et al. (1998b)
Cobalt	-4.4669	1.307	Sample et al. (1998b)
Copper	2.042	0.1444	Sample et al. (1998b)
Lead	0.0761	0.4422	Sample et al. (1998b)
Nickel	-0.2462	0.4658	Sample et al. (1998b)
Selenium	-0.4158	0.3764	Sample et al. (1998b)
Zinc	4.3632	0.0706	Sample et al. (1998b)
2,3,7,8-TCDD	0.8113	1.0993	Sample et al. (1998b)

g, Pentachlorophenol concentration in small mammal tissue (mg/kg dry weight) calculated based on regression models, where [tissue] = 0.198 + 0.00452([$diet_{invertebrate}$])

h, USEPA (2005) assumes bioaccumulation of PAHs by birds and mammals is minimal due to rapid metabolism of these compounds after ingestion.

i, Small mammal tissue estimated based on the medial BAF for the general model presented in Sample et al. (1998b)

j, No value was identified in the literature. Soil-to-small mammal BF estimated based on the approach presented in Table 5, consistent with LANL (2017).

Notes:
NA, Normalized BSAF was not applicable for metals
a, Normalized BSAF (kg OC / kg lipid) calculated based on K_{ow}, where BSAF = $K_{ow}^{-0.038}$ (DiToro and McGrath 2000)
b, For non-ionic organic constituents, dry weight BSAF calculated from sediment organic carbon and lipid normalized BSAF as follows:

$$BSAF_{dry\ weight} = BSAF_{norm} \times f_{lip;id} \times \frac{1}{f_{oc}}$$

where: $BSAF_{norm}$ = Normalized BSAF (kg OC/kg lipid)
f_{lipid} = Fraction of lipids in prey item expressed on a dry weight basis (0.065, invertebrates; 0.08, fish)
f_{oc} = Fraction of sediment organic carbon expressed on a dry weight basis (0.01 or 1%)
c, Median BSAF for non-depurated invertebrates determined by Bechtel-Jacobs (1998b)

Notes:
a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

special status species, decisions are made solely on the NOAEL-based HQs.

TRV, toxicity reference value

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

[redacted] special status species, decisions are made solely on the NOAEL-based HQs.

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

special status species, decisions are made solely on the NOAEL-based HQs.

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

[redacted] special status species, decisions are made solely on the NOAEL-based HQs.

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:
a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

2,3,7,8-TCDD	3.533	1.182	Sample et al. (1998a)

e, Bioaccumulation factor estimated as the product of the soil-plant and ingestion-beef factors reported in Baes et al. (1984)

f, Median soil-to-plant uptake factors reported in Bechtel (1998a) were used as bioaccumulation factors.

f, Small mammal tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-4.8471	0.8188	Sample et al. (1998b)
Cadmium	-1.2571	0.4723	Sample et al. (1998b)
Chromium	-1.4599	0.7338	Sample et al. (1998b)
Cobalt	-4.4669	1.307	Sample et al. (1998b)
Copper	2.042	0.1444	Sample et al. (1998b)
Lead	0.0761	0.4422	Sample et al. (1998b)
Nickel	-0.2462	0.4658	Sample et al. (1998b)
Selenium	-0.4158	0.3764	Sample et al. (1998b)
Zinc	4.3632	0.0706	Sample et al. (1998b)
2,3,7,8-TCDD	0.8113	1.0993	Sample et al. (1998b)

g, Pentachlorophenol concentration in small mammal tissue (mg/kg dry weight) calculated based on regression models, where [tissue] = 0.198 + 0.00452([$diet_{invertebrate}$])

h, USEPA (2005) assumes bioaccumulation of PAHs by birds and mammals is minimal due to rapid metabolism of these compounds after ingestion.

i, Small mammal tissue estimated based on the medial BAF for the general model presented in Sample et al. (1998b)

j, No value was identified in the literature. Soil-to-small mammal BF estimated based on the approach presented in Table 5, consistent with LANL (2017).

Notes:

a, Plant tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]). Slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Antimony	-3.233	0.938	USEPA (2007)
Beryllium	-0.5361	0.7345	USEPA (2007)
Cadmium	-0.475	0.546	Bechtel-Jacobs (1998)
Copper	0.668	0.394	Bechtel-Jacobs (1998)
Lead	-1.328	0.561	Bechtel-Jacobs (1998)
Mercury	-0.996	0.544	Bechtel-Jacobs (1998)
Nickel	-2.223	0.748	Bechtel-Jacobs (1998)
Selenium	-0.677	1.104	Bechtel-Jacobs (1998)
Zinc	1.575	0.554	Bechtel-Jacobs (1998)
Acenaphthene	-5.562	-0.8556	USEPA (2007)
Acenaphthylene	-1.144	0.791	USEPA (2007)
Anthracene	-0.9887	0.7784	USEPA (2007)
Benzo(a)anthracene	-2.7078	0.5944	USEPA (2007)
Benzo(a)pyrene	-2.0615	0.975	USEPA (2007)
Benzo(g,h,i)perylene	-0.9313	1.1829	USEPA (2007)
Benzo(k)fluoranthene	-2.1579	0.8595	USEPA (2007)
Chrysene	-2.7078	0.5944	USEPA (2007)
Fluorene	-5.562	-0.8556	USEPA (2007)
Phenanthrene	-0.1665	0.6203	USEPA (2007)

b, Soil-to-plant BAF based on K_{ow} model for non-ionic organic compounds (rinsed foliage data) provided in USEPA (2005), where: log BAF = -0.4057(log K_{ow}) + 1.781; log K_{ow} values obtained from EPA EpiSuite V. 1.69, KOWWIN module.

c, Soil-invertebrate bioaccumulation factor could not be identified; therefore, a conservative default accumulation factor of 1.0 was assummed.

d, Soil invertebrate tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-1.421	0.706	Sample et al. (1999)
Cadmium	2.114	0.795	Sample et al. (1999)
Lead	-0.218	0.807	Sample et al. (1999)
Manganese	-0.809	0.682	Sample et al. (1999)
Selenium	-0.075	0.733	Sample et al. (1999)
Zinc	4.449	0.328	Sample et al. (1999)
2,3,7,8-TCDD	3.533	1.182	Sample et al. (1998a)

e, Bioaccumulation factor estimated as the product of the soil-plant and ingestion-beef factors reported in Baes et al. (1984)

f, Median soil-to-plant uptake factors reported in Bechtel (1998a) were used as bioaccumulation factors.

f, Small mammal tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source

2,3,7,8-TCDD	0.8113	1.0993	Sample et al. (1998b)

g, Pentachlorophenol concentration in small mammal tissue (mg/kg dry weight) calculated based on regression models, where [tissue] = 0.198 + 0.00452([$diet_{invertebrate}$])

h, USEPA (2005) assumes bioaccumulation of PAHs by birds and mammals is minimal due to rapid metabolism of these compounds after ingestion.

i, Small mammal tissue estimated based on the medial BAF for the general model presented in Sample et al. (1998b)

j, No value was identified in the literature. Soil-to-small mammal BF estimated based on the approach presented in Table 5, consistent with LANL (2017).

Notes:
NA, Normalized BSAF was not applicable for metals
a, Normalized BSAF (kg OC / kg lipid) calculated based on K_{ow}, where BSAF = $K_{ow}^{-0.038}$ (DiToro and McGrath 2000)
b, For non-ionic organic constituents, dry weight BSAF calculated from sediment organic carbon and lipid normalized BSAF as follows:

$$BSAF_{dry\ weight} = BSAF_{norm} \times f_{lip;id} \times \frac{1}{f_{oc}}$$

where: $BSAF_{norm}$ = Normalized BSAF (kg OC/kg lipid)
f_{lipid} = Fraction of lipids in prey item expressed on a dry weight basis (0.065, invertebrates; 0.08, fish)
f_{oc} = Fraction of sediment organic carbon expressed on a dry weight basis (0.01 or 1%)
c, Median BSAF for non-depurated invertebrates determined by Bechtel-Jacobs (1998b)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

where:

ADD_{diet} = Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet} = Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF = Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$ = COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i = Dietary fraction of food item i (proportion of food type in the diet)
AUF = Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW = Body weight of the receptor, wet weight (kg)

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

where:

$ADD_{substrate}$ = Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s = Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$ = COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

signifies special status species, and decisions are made solely on the NOAEL-based HQs.

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

where:

ADD_{diet} = Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet} = Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF = Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$ = COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i = Dietary fraction of food item i (proportion of food type in the diet)
AUF = Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW = Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$ = Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s = Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$ = COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

signifies special status species, and decisions are made solely on the NOAEL-based HQs.

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:
NA, Normalized BSAF was not applicable for metals
a, Normalized BSAF (kg OC / kg lipid) calculated based on K_{ow}, where BSAF = $K_{ow}^{-0.038}$ (DiToro and McGrath 2000)
b, For non-ionic organic constituents, dry weight BSAF calculated from sediment organic carbon and lipid normalized BSAF as follows:

$$BSAF_{dry\ weight} = BSAF_{norm} \times f_{lip;id} \times \frac{1}{f_{oc}}$$

where: $BSAF_{norm}$ = Normalized BSAF (kg OC/kg lipid)
f_{lipid} = Fraction of lipids in prey item expressed on a dry weight basis (0.065, invertebrates; 0.08, fish)
f_{oc} = Fraction of sediment organic carbon expressed on a dry weight basis (0.01 or 1%)
c, Median BSAF for non-depurated invertebrates determined by Bechtel-Jacobs (1998b)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:
NA, Normalized BSAF was not applicable for metals
a, Normalized BSAF (kg OC / kg lipid) calculated based on K_{ow}, where BSAF = $K_{ow}^{-0.038}$ (DiToro and McGrath 2000)
b, For non-ionic organic constituents, dry weight BSAF calculated from sediment organic carbon and lipid normalized BSAF as follows:

$$BSAF_{dry\ weight} = BSAF_{norm} \times f_{lip;id} \times \frac{1}{f_{oc}}$$

where: $BSAF_{norm}$ = Normalized BSAF (kg OC/kg lipid)
f_{lipid} = Fraction of lipids in prey item expressed on a dry weight basis (0.065, invertebrates; 0.08, fish)
f_{oc} = Fraction of sediment organic carbon expressed on a dry weight basis (0.01 or 1%)
c, Median BSAF for non-depurated invertebrates determined by Bechtel-Jacobs (1998b)
