Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Table H14-1a
Estimated Concentrations in Dietary Items of Terrestrial Receptors - Main Plant Area (0 - 0.5' Interval)
Baseline Ecological Risk Assessment
Columbia Falls Aluminum Company
Columbia Falls, Montana

Notes:

a, Plant tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]). Slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Antimony	-3.233	0.938	USEPA (2007)
Beryllium	-0.5361	0.7345	USEPA (2007)
Cadmium	-0.475	0.546	Bechtel-Jacobs (1998)
Copper	0.668	0.394	Bechtel-Jacobs (1998)
Lead	-1.328	0.561	Bechtel-Jacobs (1998)
Mercury	-0.996	0.544	Bechtel-Jacobs (1998)
Nickel	-2.223	0.748	Bechtel-Jacobs (1998)
Selenium	-0.677	1.104	Bechtel-Jacobs (1998)
Zinc	1.575	0.554	Bechtel-Jacobs (1998)
Acenaphthene	-5.562	-0.8556	USEPA (2007)
Acenaphthylene	-1.144	0.791	USEPA (2007)
Anthracene	-0.9887	0.7784	USEPA (2007)
Benzo(a)anthracene	-2.7078	0.5944	USEPA (2007)
Benzo(a)pyrene	-2.0615	0.975	USEPA (2007)
Benzo(g,h,i)perylene	-0.9313	1.1829	USEPA (2007)
Benzo(k)fluoranthene	-2.1579	0.8595	USEPA (2007)
Chrysene	-2.7078	0.5944	USEPA (2007)
Fluorene	-5.562	-0.8556	USEPA (2007)
Phenanthrene	-0.1665	0.6203	USEPA (2007)

b, Soil-to-plant BAF based on K_{ow} model for non-ionic organic compounds (rinsed foliage data) provided in USEPA (2005), where: log BAF = -0.4057(log K_{ow}) + 1.781; log K_{ow} values obtained from EPA EpiSuite V. 1.69, KOWWIN module.

c, Soil-invertebrate bioaccumulation factor could not be identified; therefore, a conservative default accumulation factor of 1.0 was assumed.

d, Soil invertebrate tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-1.421	0.706	Sample et al. (1999)
Cadmium	2.114	0.795	Sample et al. (1999)
Lead	-0.218	0.807	Sample et al. (1999)
Manganese	-0.809	0.682	Sample et al. (1999)
Selenium	-0.075	0.733	Sample et al. (1999)
Zinc	4.449	0.328	Sample et al. (1999)
2,3,7,8-TCDD	3.533	1.182	Sample et al. (1998a)

e, Bioaccumulation factor estimated as the product of the soil-plant and ingestion-beef factors reported in Baes et al. (1984)

f, Median soil-to-plant uptake factors reported in Bechtel (1998a) were used as bioaccumulation factors.

f, Small mammal tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-4.8471	0.8188	Sample et al. (1998b)
Cadmium	-1.2571	0.4723	Sample et al. (1998b)
Chromium	-1.4599	0.7338	Sample et al. (1998b)
Cobalt	-4.4669	1.307	Sample et al. (1998b)
Copper	2.042	0.1444	Sample et al. (1998b)
Lead	0.0761	0.4422	Sample et al. (1998b)
Nickel	-0.2462	0.4658	Sample et al. (1998b)
Selenium	-0.4158	0.3764	Sample et al. (1998b)
Zinc	4.3632	0.0706	Sample et al. (1998b)
2,3,7,8-TCDD	0.8113	1.0993	Sample et al. (1998b)

g, Pentachlorophenol concentration in small mammal tissue (mg/kg dry weight) calculated based on regression models, where [tissue] = 0.198 + 0.00452([diet $_{invertebrate}$])

h, USEPA (2005) assumes bioaccumulation of PAHs by birds and mammals is minimal due to rapid metabolism of these compounds after ingestion.

i, Small mammal tissue estimated based on the medial BAF for the general model presented in Sample et al. (1998b)

j, No value was identified in the literature. Soil-to-small mammal BF estimated based on the approach presented in Table 5, consistent with LANL (2017).

Baseline Ecological Risk Assessment
Columbia Falls Aluminum Company
Columbia Falls, Montana

Notes:

a, Plant tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]). Slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Antimony	-3.233	0.938	USEPA (2007)
Beryllium	-0.5361	0.7345	USEPA (2007)
Cadmium	-0.475	0.546	Bechtel-Jacobs (1998)
Copper	0.668	0.394	Bechtel-Jacobs (1998)
Lead	-1.328	0.561	Bechtel-Jacobs (1998)
Mercury	-0.996	0.544	Bechtel-Jacobs (1998)
Nickel	-2.223	0.748	Bechtel-Jacobs (1998)
Selenium	-0.677	1.104	Bechtel-Jacobs (1998)
Zinc	1.575	0.554	Bechtel-Jacobs (1998)
Acenaphthene	-5.562	-0.8556	USEPA (2007)
Acenaphthylene	-1.144	0.791	USEPA (2007)
Anthracene	-0.9887	0.7784	USEPA (2007)
Benzo(a)anthracene	-2.7078	0.5944	USEPA (2007)
Benzo(a)pyrene	-2.0615	0.975	USEPA (2007)
Benzo(g,h,i)perylene	-0.9313	1.1829	USEPA (2007)
Benzo(k)fluoranthene	-2.1579	0.8595	USEPA (2007)
Chrysene	-2.7078	0.5944	USEPA (2007)
Fluorene	-5.562	-0.8556	USEPA (2007)
Phenanthrene	-0.1665	0.6203	USEPA (2007)

b, Soil-to-plant BAF based on K_{ow} model for non-ionic organic compounds (rinsed foliage data) provided in USEPA (2005), where: log BAF = -0.4057(log K_{ow}) + 1.781; log K_{ow} values obtained from EPA EpiSuite V. 1.69, KOWWIN module.

c, Soil-invertebrate bioaccumulation factor could not be identified; therefore, a conservative default accumulation factor of 1.0 was assumed.

d, Soil invertebrate tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-1.421	0.706	Sample et al. (1999)
Cadmium	2.114	0.795	Sample et al. (1999)
Lead	-0.218	0.807	Sample et al. (1999)
Manganese	-0.809	0.682	Sample et al. (1999)
Selenium	-0.075	0.733	Sample et al. (1999)
Zinc	4.449	0.328	Sample et al. (1999)
2,3,7,8-TCDD	3.533	1.182	Sample et al. (1998a)

e, Bioaccumulation factor estimated as the product of the soil-plant and ingestion-beef factors reported in Baes et al. (1984)

f, Median soil-to-plant uptake factors reported in Bechtel (1998a) were used as bioaccumulation factors.

f, Small mammal tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-4.8471	0.8188	Sample et al. (1998b)
Cadmium	-1.2571	0.4723	Sample et al. (1998b)
Chromium	-1.4599	0.7338	Sample et al. (1998b)
Cobalt	-4.4669	1.307	Sample et al. (1998b)
Copper	2.042	0.1444	Sample et al. (1998b)
Lead	0.0761	0.4422	Sample et al. (1998b)
Nickel	-0.2462	0.4658	Sample et al. (1998b)
Selenium	-0.4158	0.3764	Sample et al. (1998b)
Zinc	4.3632	0.0706	Sample et al. (1998b)
2,3,7,8-TCDD	0.8113	1.0993	Sample et al. (1998b)

g, Pentachlorophenol concentration in small mammal tissue (mg/kg dry weight) calculated based on regression models, where [tissue] = 0.198 + 0.00452([$diet_{invertebrate}$])

h, USEPA (2005) assumes bioaccumulation of PAHs by birds and mammals is minimal due to rapid metabolism of these compounds after ingestion.

i, Small mammal tissue estimated based on the medial BAF for the general model presented in Sample et al. (1998b)

j, No value was identified in the literature. Soil-to-small mammal BF estimated based on the approach presented in Table 5, consistent with LANL (2017).

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Columbia Falls Aluminum Company
Columbia Falls, Montana

Notes:

a, Plant tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]). Slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Antimony	-3.233	0.938	USEPA (2007)
Beryllium	-0.5361	0.7345	USEPA (2007)
Cadmium	-0.475	0.546	Bechtel-Jacobs (1998)
Copper	0.668	0.394	Bechtel-Jacobs (1998)
Lead	-1.328	0.561	Bechtel-Jacobs (1998)
Mercury	-0.996	0.544	Bechtel-Jacobs (1998)
Nickel	-2.223	0.748	Bechtel-Jacobs (1998)
Selenium	-0.677	1.104	Bechtel-Jacobs (1998)
Zinc	1.575	0.554	Bechtel-Jacobs (1998)
Acenaphthene	-5.562	-0.8556	USEPA (2007)
Acenaphthylene	-1.144	0.791	USEPA (2007)
Anthracene	-0.9887	0.7784	USEPA (2007)
Benzo(a)anthracene	-2.7078	0.5944	USEPA (2007)
Benzo(a)pyrene	-2.0615	0.975	USEPA (2007)
Benzo(g,h,i)perylene	-0.9313	1.1829	USEPA (2007)
Benzo(k)fluoranthene	-2.1579	0.8595	USEPA (2007)
Chrysene	-2.7078	0.5944	USEPA (2007)
Fluorene	-5.562	-0.8556	USEPA (2007)
Phenanthrene	-0.1665	0.6203	USEPA (2007)

b, Soil-to-plant BAF based on K_{ow} model for non-ionic organic compounds (rinsed foliage data) provided in USEPA (2005), where: log BAF = -0.4057(log K_{ow}) + 1.781; log K_{ow} values obtained from EPA EpiSuite V. 1.69, KOWWIN module.

c, Soil-invertebrate bioaccumulation factor could not be identified; therefore, a conservative default accumulation factor of 1.0 was assumed.

d, Soil invertebrate tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-1.421	0.706	Sample et al. (1999)
Cadmium	2.114	0.795	Sample et al. (1999)
Lead	-0.218	0.807	Sample et al. (1999)
Manganese	-0.809	0.682	Sample et al. (1999)
Selenium	-0.075	0.733	Sample et al. (1999)
Zinc	4.449	0.328	Sample et al. (1999)
2,3,7,8-TCDD	3.533	1.182	Sample et al. (1998a)

e, Bioaccumulation factor estimated as the product of the soil-plant and ingestion-beef factors reported in Baes et al. (1984)

f, Median soil-to-plant uptake factors reported in Bechtel (1998a) were used as bioaccumulation factors.

f, Small mammal tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-4.8471	0.8188	Sample et al. (1998b)
Cadmium	-1.2571	0.4723	Sample et al. (1998b)
Chromium	-1.4599	0.7338	Sample et al. (1998b)
Cobalt	-4.4669	1.307	Sample et al. (1998b)
Copper	2.042	0.1444	Sample et al. (1998b)
Lead	0.0761	0.4422	Sample et al. (1998b)
Nickel	-0.2462	0.4658	Sample et al. (1998b)
Selenium	-0.4158	0.3764	Sample et al. (1998b)
Zinc	4.3632	0.0706	Sample et al. (1998b)
2,3,7,8-TCDD	0.8113	1.0993	Sample et al. (1998b)

g, Pentachlorophenol concentration in small mammal tissue (mg/kg dry weight) calculated based on regression models, where [tissue] = 0.198 + 0.00452([diet $_{invertebrate}$])

h, USEPA (2005) assumes bioaccumulation of PAHs by birds and mammals is minimal due to rapid metabolism of these compounds after ingestion.

i, Small mammal tissue estimated based on the medial BAF for the general model presented in Sample et al. (1998b)

j, No value was identified in the literature. Soil-to-small mammal BF estimated based on the approach presented in Table 5, consistent with LANL (2017).

Table H15-1b
Estimated Concentrations in Dietary Items of Terrestrial Receptors - Central Landfills Area (0 - 2' Interval)
Baseline Ecological Risk Assessment
Columbia Falls Aluminum Company
Columbia Falls, Montana

Notes:

a, Plant tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]). Slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Antimony	-3.233	0.938	USEPA (2007)
Beryllium	-0.5361	0.7345	USEPA (2007)
Cadmium	-0.475	0.546	Bechtel-Jacobs (1998)
Copper	0.668	0.394	Bechtel-Jacobs (1998)
Lead	-1.328	0.561	Bechtel-Jacobs (1998)
Mercury	-0.996	0.544	Bechtel-Jacobs (1998)
Nickel	-2.223	0.748	Bechtel-Jacobs (1998)
Selenium	-0.677	1.104	Bechtel-Jacobs (1998)
Zinc	1.575	0.554	Bechtel-Jacobs (1998)
Acenaphthene	-5.562	-0.8556	USEPA (2007)
Acenaphthylene	-1.144	0.791	USEPA (2007)
Anthracene	-0.9887	0.7784	USEPA (2007)
Benzo(a)anthracene	-2.7078	0.5944	USEPA (2007)
Benzo(a)pyrene	-2.0615	0.975	USEPA (2007)
Benzo(g,h,i)perylene	-0.9313	1.1829	USEPA (2007)
Benzo(k)fluoranthene	-2.1579	0.8595	USEPA (2007)
Chrysene	-2.7078	0.5944	USEPA (2007)
Fluorene	-5.562	-0.8556	USEPA (2007)
Phenanthrene	-0.1665	0.6203	USEPA (2007)

b, Soil-to-plant BAF based on K_{ow} model for non-ionic organic compounds (rinsed foliage data) provided in USEPA (2005), where: log BAF = -0.4057(log K_{ow}) + 1.781; log K_{ow} values obtained from EPA EpiSuite V. 1.69, KOWWIN module.

c, Soil-invertebrate bioaccumulation factor could not be identified; therefore, a conservative default accumulation factor of 1.0 was assumed.

d, Soil invertebrate tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-1.421	0.706	Sample et al. (1999)
Cadmium	2.114	0.795	Sample et al. (1999)
Lead	-0.218	0.807	Sample et al. (1999)
Manganese	-0.809	0.682	Sample et al. (1999)
Selenium	-0.075	0.733	Sample et al. (1999)
Zinc	4.449	0.328	Sample et al. (1999)
2,3,7,8-TCDD	3.533	1.182	Sample et al. (1998a)

e, Bioaccumulation factor estimated as the product of the soil-plant and ingestion-beef factors reported in Baes et al. (1984)

f, Median soil-to-plant uptake factors reported in Bechtel (1998a) were used as bioaccumulation factors.

f, Small mammal tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-4.8471	0.8188	Sample et al. (1998b)
Cadmium	-1.2571	0.4723	Sample et al. (1998b)
Chromium	-1.4599	0.7338	Sample et al. (1998b)
Cobalt	-4.4669	1.307	Sample et al. (1998b)
Copper	2.042	0.1444	Sample et al. (1998b)
Lead	0.0761	0.4422	Sample et al. (1998b)
Nickel	-0.2462	0.4658	Sample et al. (1998b)
Selenium	-0.4158	0.3764	Sample et al. (1998b)
Zinc	4.3632	0.0706	Sample et al. (1998b)
2,3,7,8-TCDD	0.8113	1.0993	Sample et al. (1998b)

g, Pentachlorophenol concentration in small mammal tissue (mg/kg dry weight) calculated based on regression models, where [tissue] = 0.198 + 0.00452([$diet_{invertebrate}$])

h, USEPA (2005) assumes bioaccumulation of PAHs by birds and mammals is minimal due to rapid metabolism of these compounds after ingestion.

i, Small mammal tissue estimated based on the medial BAF for the general model presented in Sample et al. (1998b)

j, No value was identified in the literature. Soil-to-small mammal BF estimated based on the approach presented in Table 5, consistent with LANL (2017).

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Table H15-5
Refined Exposure Evaluation - Yellow-billed Cuckoo

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Table H16-1a
Estimated Concentrations in Dietary Items of Terrestrial Receptors - Industrial Landfills Area (0 - 0.5' Interval)
Baseline Ecological Risk Assessment
Columbia Falls Aluminum Company
Columbia Falls, Montana

Notes:

a, Plant tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]). Slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Antimony	-3.233	0.938	USEPA (2007)
Beryllium	-0.5361	0.7345	USEPA (2007)
Cadmium	-0.475	0.546	Bechtel-Jacobs (1998)
Copper	0.668	0.394	Bechtel-Jacobs (1998)
Lead	-1.328	0.561	Bechtel-Jacobs (1998)
Mercury	-0.996	0.544	Bechtel-Jacobs (1998)
Nickel	-2.223	0.748	Bechtel-Jacobs (1998)
Selenium	-0.677	1.104	Bechtel-Jacobs (1998)
Zinc	1.575	0.554	Bechtel-Jacobs (1998)
Acenaphthene	-5.562	-0.8556	USEPA (2007)
Acenaphthylene	-1.144	0.791	USEPA (2007)
Anthracene	-0.9887	0.7784	USEPA (2007)
Benzo(a)anthracene	-2.7078	0.5944	USEPA (2007)
Benzo(a)pyrene	-2.0615	0.975	USEPA (2007)
Benzo(g,h,i)perylene	-0.9313	1.1829	USEPA (2007)
Benzo(k)fluoranthene	-2.1579	0.8595	USEPA (2007)
Chrysene	-2.7078	0.5944	USEPA (2007)
Fluorene	-5.562	-0.8556	USEPA (2007)
Phenanthrene	-0.1665	0.6203	USEPA (2007)

b, Soil-to-plant BAF based on K_{ow} model for non-ionic organic compounds (rinsed foliage data) provided in USEPA (2005), where: log BAF = -0.4057(log K_{ow}) + 1.781; log K_{ow} values obtained from EPA EpiSuite V. 1.69, KOWWIN module.

c, Soil-invertebrate bioaccumulation factor could not be identified; therefore, a conservative default accumulation factor of 1.0 was assumed.

d, Soil invertebrate tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-1.421	0.706	Sample et al. (1999)
Cadmium	2.114	0.795	Sample et al. (1999)
Lead	-0.218	0.807	Sample et al. (1999)
Manganese	-0.809	0.682	Sample et al. (1999)
Selenium	-0.075	0.733	Sample et al. (1999)
Zinc	4.449	0.328	Sample et al. (1999)
2,3,7,8-TCDD	3.533	1.182	Sample et al. (1998a)

e, Bioaccumulation factor estimated as the product of the soil-plant and ingestion-beef factors reported in Baes et al. (1984)

f, Median soil-to-plant uptake factors reported in Bechtel (1998a) were used as bioaccumulation factors.

f, Small mammal tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-4.8471	0.8188	Sample et al. (1998b)
Cadmium	-1.2571	0.4723	Sample et al. (1998b)
Chromium	-1.4599	0.7338	Sample et al. (1998b)
Cobalt	-4.4669	1.307	Sample et al. (1998b)
Copper	2.042	0.1444	Sample et al. (1998b)
Lead	0.0761	0.4422	Sample et al. (1998b)
Nickel	-0.2462	0.4658	Sample et al. (1998b)
Selenium	-0.4158	0.3764	Sample et al. (1998b)
Zinc	4.3632	0.0706	Sample et al. (1998b)
2,3,7,8-TCDD	0.8113	1.0993	Sample et al. (1998b)

g, Pentachlorophenol concentration in small mammal tissue (mg/kg dry weight) calculated based on regression models, where [tissue] = 0.198 + 0.00452([$diet_{invertebrate}$])

h, USEPA (2005) assumes bioaccumulation of PAHs by birds and mammals is minimal due to rapid metabolism of these compounds after ingestion.

i, Small mammal tissue estimated based on the medial BAF for the general model presented in Sample et al. (1998b)

j, No value was identified in the literature. Soil-to-small mammal BF estimated based on the approach presented in Table 5, consistent with LANL (2017).

Table H16-1b
Estimated Concentrations in Dietary Items of Terrestrial Receptors - Industrial Landfills Area (0 - 2' Interval)
Baseline Ecological Risk Assessment
Columbia Falls Aluminum Company
Columbia Falls, Montana

Notes:

a, Plant tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]). Slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Antimony	-3.233	0.938	USEPA (2007)
Beryllium	-0.5361	0.7345	USEPA (2007)
Cadmium	-0.475	0.546	Bechtel-Jacobs (1998)
Copper	0.668	0.394	Bechtel-Jacobs (1998)
Lead	-1.328	0.561	Bechtel-Jacobs (1998)
Mercury	-0.996	0.544	Bechtel-Jacobs (1998)
Nickel	-2.223	0.748	Bechtel-Jacobs (1998)
Selenium	-0.677	1.104	Bechtel-Jacobs (1998)
Zinc	1.575	0.554	Bechtel-Jacobs (1998)
Acenaphthene	-5.562	-0.8556	USEPA (2007)
Acenaphthylene	-1.144	0.791	USEPA (2007)
Anthracene	-0.9887	0.7784	USEPA (2007)
Benzo(a)anthracene	-2.7078	0.5944	USEPA (2007)
Benzo(a)pyrene	-2.0615	0.975	USEPA (2007)
Benzo(g,h,i)perylene	-0.9313	1.1829	USEPA (2007)
Benzo(k)fluoranthene	-2.1579	0.8595	USEPA (2007)
Chrysene	-2.7078	0.5944	USEPA (2007)
Fluorene	-5.562	-0.8556	USEPA (2007)
Phenanthrene	-0.1665	0.6203	USEPA (2007)

b, Soil-to-plant BAF based on K_{ow} model for non-ionic organic compounds (rinsed foliage data) provided in USEPA (2005), where: log BAF = -0.4057(log K_{ow}) + 1.781; log K_{ow} values obtained from EPA EpiSuite V. 1.69, KOWWIN module.

c, Soil-invertebrate bioaccumulation factor could not be identified; therefore, a conservative default accumulation factor of 1.0 was assumed.

d, Soil invertebrate tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-1.421	0.706	Sample et al. (1999)
Cadmium	2.114	0.795	Sample et al. (1999)
Lead	-0.218	0.807	Sample et al. (1999)
Manganese	-0.809	0.682	Sample et al. (1999)
Selenium	-0.075	0.733	Sample et al. (1999)
Zinc	4.449	0.328	Sample et al. (1999)
2,3,7,8-TCDD	3.533	1.182	Sample et al. (1998a)

e, Bioaccumulation factor estimated as the product of the soil-plant and ingestion-beef factors reported in Baes et al. (1984)

f, Median soil-to-plant uptake factors reported in Bechtel (1998a) were used as bioaccumulation factors.

f, Small mammal tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-4.8471	0.8188	Sample et al. (1998b)
Cadmium	-1.2571	0.4723	Sample et al. (1998b)
Chromium	-1.4599	0.7338	Sample et al. (1998b)
Cobalt	-4.4669	1.307	Sample et al. (1998b)
Copper	2.042	0.1444	Sample et al. (1998b)
Lead	0.0761	0.4422	Sample et al. (1998b)
Nickel	-0.2462	0.4658	Sample et al. (1998b)
Selenium	-0.4158	0.3764	Sample et al. (1998b)
Zinc	4.3632	0.0706	Sample et al. (1998b)
2,3,7,8-TCDD	0.8113	1.0993	Sample et al. (1998b)

g, Pentachlorophenol concentration in small mammal tissue (mg/kg dry weight) calculated based on regression models, where [tissue] = 0.198 + 0.00452([$diet_{invertebrate}$])

h, USEPA (2005) assumes bioaccumulation of PAHs by birds and mammals is minimal due to rapid metabolism of these compounds after ingestion.

i, Small mammal tissue estimated based on the medial BAF for the general model presented in Sample et al. (1998b)

j, No value was identified in the literature. Soil-to-small mammal BF estimated based on the approach presented in Table 5, consistent with LANL (2017).

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Plant tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]). Slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Antimony	-3.233	0.938	USEPA (2007)
Beryllium	-0.5361	0.7345	USEPA (2007)
Cadmium	-0.475	0.546	Bechtel-Jacobs (1998)
Copper	0.668	0.394	Bechtel-Jacobs (1998)
Lead	-1.328	0.561	Bechtel-Jacobs (1998)
Mercury	-0.996	0.544	Bechtel-Jacobs (1998)
Nickel	-2.223	0.748	Bechtel-Jacobs (1998)
Selenium	-0.677	1.104	Bechtel-Jacobs (1998)
Zinc	1.575	0.554	Bechtel-Jacobs (1998)
Acenaphthene	-5.562	-0.8556	USEPA (2007)
Acenaphthylene	-1.144	0.791	USEPA (2007)
Anthracene	-0.9887	0.7784	USEPA (2007)
Benzo(a)anthracene	-2.7078	0.5944	USEPA (2007)
Benzo(a)pyrene	-2.0615	0.975	USEPA (2007)
Benzo(g,h,i)perylene	-0.9313	1.1829	USEPA (2007)
Benzo(k)fluoranthene	-2.1579	0.8595	USEPA (2007)
Chrysene	-2.7078	0.5944	USEPA (2007)
Fluorene	-5.562	-0.8556	USEPA (2007)
Phenanthrene	-0.1665	0.6203	USEPA (2007)

b, Soil-to-plant BAF based on K_{ow} model for non-ionic organic compounds (rinsed foliage data) provided in USEPA (2005), where: log BAF = -0.4057(log K_{ow}) + 1.781; log K_{ow} values obtained from EPA EpiSuite V. 1.69, KOWWIN module.

c, Soil-invertebrate bioaccumulation factor could not be identified; therefore, a conservative default accumulation factor of 1.0 was assumed.

d, Soil invertebrate tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-1.421	0.706	Sample et al. (1999)
Cadmium	2.114	0.795	Sample et al. (1999)
Lead	-0.218	0.807	Sample et al. (1999)
Manganese	-0.809	0.682	Sample et al. (1999)
Selenium	-0.075	0.733	Sample et al. (1999)
Zinc	4.449	0.328	Sample et al. (1999)
2,3,7,8-TCDD	3.533	1.182	Sample et al. (1998a)

e, Bioaccumulation factor estimated as the product of the soil-plant and ingestion-beef factors reported in Baes et al. (1984)

f, Small mammal tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-4.8471	0.8188	Sample et al. (1998b)
Cadmium	-1.2571	0.4723	Sample et al. (1998b)
Chromium	-1.4599	0.7338	Sample et al. (1998b)
Cobalt	-4.4669	1.307	Sample et al. (1998b)
Copper	2.042	0.1444	Sample et al. (1998b)
Lead	0.0761	0.4422	Sample et al. (1998b)
Nickel	-0.2462	0.4658	Sample et al. (1998b)
Selenium	-0.4158	0.3764	Sample et al. (1998b)
Zinc	4.3632	0.0706	Sample et al. (1998b)
2,3,7,8-TCDD	0.8113	1.0993	Sample et al. (1998b)

g, Pentachlorophenol concentration in small mammal tissue (mg/kg dry weight) calculated based on regression models, where [tissue] = 0.198 + 0.00452([diet$_{invertebrate}$])

h, USEPA (2005) assumes bioaccumulation of PAHs by birds and mammals is minimal due to rapid metabolism of these compounds after ingestion.

i, Small mammal tissue estimated based on the medial BAF for the general model presented in Sample et al. (1998b)

j, No value was identified in the literature. Soil-to-small mammal BF estimated based on the approach presented in Table 5, consistent with LANL (2017).

Notes:

a, Plant tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]). Slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Antimony	-3.233	0.938	USEPA (2007)
Beryllium	-0.5361	0.7345	USEPA (2007)
Cadmium	-0.475	0.546	Bechtel-Jacobs (1998)
Copper	0.668	0.394	Bechtel-Jacobs (1998)
Lead	-1.328	0.561	Bechtel-Jacobs (1998)
Mercury	-0.996	0.544	Bechtel-Jacobs (1998)
Nickel	-2.223	0.748	Bechtel-Jacobs (1998)
Selenium	-0.677	1.104	Bechtel-Jacobs (1998)
Zinc	1.575	0.554	Bechtel-Jacobs (1998)
Acenaphthene	-5.562	-0.8556	USEPA (2007)
Acenaphthylene	-1.144	0.791	USEPA (2007)
Anthracene	-0.9887	0.7784	USEPA (2007)
Benzo(a)anthracene	-2.7078	0.5944	USEPA (2007)
Benzo(a)pyrene	-2.0615	0.975	USEPA (2007)
Benzo(g,h,i)perylene	-0.9313	1.1829	USEPA (2007)
Benzo(k)fluoranthene	-2.1579	0.8595	USEPA (2007)
Chrysene	-2.7078	0.5944	USEPA (2007)
Fluorene	-5.562	-0.8556	USEPA (2007)
Phenanthrene	-0.1665	0.6203	USEPA (2007)

b, Soil-to-plant BAF based on K_{ow} model for non-ionic organic compounds (rinsed foliage data) provided in USEPA (2005), where: log BAF = -0.4057(log K_{ow}) + 1.781; log K_{ow} values obtained from EPA EpiSuite V. 1.69, KOWWIN module.

c, Soil-invertebrate bioaccumulation factor could not be identified; therefore, a conservative default accumulation factor of 1.0 was assumed.

d, Soil invertebrate tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-1.421	0.706	Sample et al. (1999)
Cadmium	2.114	0.795	Sample et al. (1999)
Lead	-0.218	0.807	Sample et al. (1999)
Manganese	-0.809	0.682	Sample et al. (1999)
Selenium	-0.075	0.733	Sample et al. (1999)
Zinc	4.449	0.328	Sample et al. (1999)
2,3,7,8-TCDD	3.533	1.182	Sample et al. (1998a)

e, Bioaccumulation factor estimated as the product of the soil-plant and ingestion-beef factors reported in Baes et al. (1984)

f, Small mammal tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-4.8471	0.8188	Sample et al. (1998b)
Cadmium	-1.2571	0.4723	Sample et al. (1998b)
Chromium	-1.4599	0.7338	Sample et al. (1998b)
Cobalt	-4.4669	1.307	Sample et al. (1998b)
Copper	2.042	0.1444	Sample et al. (1998b)

2,3,7,8-TCDD	0.8113	1.0993	Sample et al. (1998b)

g, Pentachlorophenol concentration in small mammal tissue (mg/kg dry weight) calculated based on regression models, where [tissue] = 0.198 + 0.00452([diet$_{Invertebrate}$])

h, USEPA (2005) assumes bioaccumulation of PAHs by birds and mammals is minimal due to rapid metabolism of these compounds after ingestion.

i, Small mammal tissue estimated based on the medial BAF for the general model presented in Sample et al. (1998b)

j, No value was identified in the literature. Soil-to-small mammal BF estimated based on the approach presented in Table 5, consistent with LANL (2017).

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Baseline Ecological Risk Assessment
Columbia Falls Aluminum Company
Columbia Falls, Montana

Notes:

a, Plant tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]). Slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Antimony	-3.233	0.938	USEPA (2007)
Beryllium	-0.5361	0.7345	USEPA (2007)
Cadmium	-0.475	0.546	Bechtel-Jacobs (1998)
Copper	0.668	0.394	Bechtel-Jacobs (1998)
Lead	-1.328	0.561	Bechtel-Jacobs (1998)
Mercury	-0.996	0.544	Bechtel-Jacobs (1998)
Nickel	-2.223	0.748	Bechtel-Jacobs (1998)
Selenium	-0.677	1.104	Bechtel-Jacobs (1998)
Zinc	1.575	0.554	Bechtel-Jacobs (1998)
Acenaphthene	-5.562	-0.8556	USEPA (2007)
Acenaphthylene	-1.144	0.791	USEPA (2007)
Anthracene	-0.9887	0.7784	USEPA (2007)
Benzo(a)anthracene	-2.7078	0.5944	USEPA (2007)
Benzo(a)pyrene	-2.0615	0.975	USEPA (2007)
Benzo(g,h,i)perylene	-0.9313	1.1829	USEPA (2007)
Benzo(k)fluoranthene	-2.1579	0.8595	USEPA (2007)
Chrysene	-2.7078	0.5944	USEPA (2007)
Fluorene	-5.562	-0.8556	USEPA (2007)
Phenanthrene	-0.1665	0.6203	USEPA (2007)

b, Soil-to-plant BAF based on K_{ow} model for non-ionic organic compounds (rinsed foliage data) provided in USEPA (2005), where: log BAF = -0.4057(log K_{ow}) + 1.781; log K_{ow} values obtained from EPA EpiSuite V. 1.69, KOWWIN module.

c, Soil-invertebrate bioaccumulation factor could not be identified; therefore, a conservative default accumulation factor of 1.0 was assumed.

d, Soil invertebrate tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-1.421	0.706	Sample et al. (1999)
Cadmium	2.114	0.795	Sample et al. (1999)
Lead	-0.218	0.807	Sample et al. (1999)
Manganese	-0.809	0.682	Sample et al. (1999)
Selenium	-0.075	0.733	Sample et al. (1999)
Zinc	4.449	0.328	Sample et al. (1999)
2,3,7,8-TCDD	3.533	1.182	Sample et al. (1998a)

e, Bioaccumulation factor estimated as the product of the soil-plant and ingestion-beef factors reported in Baes et al. (1984)

f, Small mammal tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-4.8471	0.8188	Sample et al. (1998b)
Cadmium	-1.2571	0.4723	Sample et al. (1998b)
Chromium	-1.4599	0.7338	Sample et al. (1998b)
Cobalt	-4.4669	1.307	Sample et al. (1998b)
Copper	2.042	0.1444	Sample et al. (1998b)
Lead	0.0761	0.4422	Sample et al. (1998b)
Nickel	-0.2462	0.4658	Sample et al. (1998b)
Selenium	-0.4158	0.3764	Sample et al. (1998b)
Zinc	4.3632	0.0706	Sample et al. (1998b)
2,3,7,8-TCDD	0.8113	1.0993	Sample et al. (1998b)

g, Pentachlorophenol concentration in small mammal tissue (mg/kg dry weight) calculated based on regression models, where [tissue] = 0.198 + 0.00452([$diet_{invertebrate}$])

h, USEPA (2005) assumes bioaccumulation of PAHs by birds and mammals is minimal due to rapid metabolism of these compounds after ingestion.

i, Small mammal tissue estimated based on the medial BAF for the general model presented in Sample et al. (1998b)

j, No value was identified in the literature. Soil-to-small mammal BF estimated based on the approach presented in Table 5, consistent with LANL (2017).

Baseline Ecological Risk Assessment
Columbia Falls Aluminum Company
Columbia Falls, Montana

Notes:

a, Plant tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]). Slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Antimony	-3.233	0.938	USEPA (2007)
Beryllium	-0.5361	0.7345	USEPA (2007)
Cadmium	-0.475	0.546	Bechtel-Jacobs (1998)
Copper	0.668	0.394	Bechtel-Jacobs (1998)
Lead	-1.328	0.561	Bechtel-Jacobs (1998)
Mercury	-0.996	0.544	Bechtel-Jacobs (1998)
Nickel	-2.223	0.748	Bechtel-Jacobs (1998)
Selenium	-0.677	1.104	Bechtel-Jacobs (1998)
Zinc	1.575	0.554	Bechtel-Jacobs (1998)
Acenaphthene	-5.562	-0.8556	USEPA (2007)
Acenaphthylene	-1.144	0.791	USEPA (2007)
Anthracene	-0.9887	0.7784	USEPA (2007)
Benzo(a)anthracene	-2.7078	0.5944	USEPA (2007)
Benzo(a)pyrene	-2.0615	0.975	USEPA (2007)
Benzo(g,h,i)perylene	-0.9313	1.1829	USEPA (2007)
Benzo(k)fluoranthene	-2.1579	0.8595	USEPA (2007)
Chrysene	-2.7078	0.5944	USEPA (2007)
Fluorene	-5.562	-0.8556	USEPA (2007)
Phenanthrene	-0.1665	0.6203	USEPA (2007)

b, Soil-to-plant BAF based on K_{ow} model for non-ionic organic compounds (rinsed foliage data) provided in USEPA (2005), where: log BAF = -0.4057(log K_{ow}) + 1.781; log K_{ow} values obtained from EPA EpiSuite V. 1.69, KOWWIN module.

c, Soil-invertebrate bioaccumulation factor could not be identified; therefore, a conservative default accumulation factor of 1.0 was assumed.

d, Soil invertebrate tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-1.421	0.706	Sample et al. (1999)
Cadmium	2.114	0.795	Sample et al. (1999)
Lead	-0.218	0.807	Sample et al. (1999)
Manganese	-0.809	0.682	Sample et al. (1999)
Selenium	-0.075	0.733	Sample et al. (1999)
Zinc	4.449	0.328	Sample et al. (1999)
2,3,7,8-TCDD	3.533	1.182	Sample et al. (1998a)

e, Bioaccumulation factor estimated as the product of the soil-plant and ingestion-beef factors reported in Baes et al. (1984)

f, Small mammal tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-4.8471	0.8188	Sample et al. (1998b)
Cadmium	-1.2571	0.4723	Sample et al. (1998b)
Chromium	-1.4599	0.7338	Sample et al. (1998b)
Cobalt	-4.4669	1.307	Sample et al. (1998b)
Copper	2.042	0.1444	Sample et al. (1998b)
Lead	0.0761	0.4422	Sample et al. (1998b)
Nickel	-0.2462	0.4658	Sample et al. (1998b)
Selenium	-0.4158	0.3764	Sample et al. (1998b)
Zinc	4.3632	0.0706	Sample et al. (1998b)
2,3,7,8-TCDD	0.8113	1.0993	Sample et al. (1998b)

g, Pentachlorophenol concentration in small mammal tissue (mg/kg dry weight) calculated based on regression models, where [tissue] = 0.198 + 0.00452([diet$_{invertebrate}$])

h, USEPA (2005) assumes bioaccumulation of PAHs by birds and mammals is minimal due to rapid metabolism of these compounds after ingestion.

i, Small mammal tissue estimated based on the medial BAF for the general model presented in Sample et al. (1998b)

j, No value was identified in the literature. Soil-to-small mammal BF estimated based on the approach presented in Table 5, consistent with LANL (2017).

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Table H19-1a
Estimated Concentrations in Dietary Items of Terrestrial Receptors - Western Undeveloped Area (0 - 0.5' Interval)
Baseline Ecological Risk Assessment
Columbia Falls Aluminum Company
Columbia Falls, Montana

Notes:

a, Plant tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]). Slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Antimony	-3.233	0.938	USEPA (2007)
Beryllium	-0.5361	0.7345	USEPA (2007)
Cadmium	-0.475	0.546	Bechtel-Jacobs (1998)
Copper	0.668	0.394	Bechtel-Jacobs (1998)
Lead	-1.328	0.561	Bechtel-Jacobs (1998)
Mercury	-0.996	0.544	Bechtel-Jacobs (1998)
Nickel	-2.223	0.748	Bechtel-Jacobs (1998)
Selenium	-0.677	1.104	Bechtel-Jacobs (1998)
Zinc	1.575	0.554	Bechtel-Jacobs (1998)
Acenaphthene	-5.562	-0.8556	USEPA (2007)
Acenaphthylene	-1.144	0.791	USEPA (2007)
Anthracene	-0.9887	0.7784	USEPA (2007)
Benzo(a)anthracene	-2.7078	0.5944	USEPA (2007)
Benzo(a)pyrene	-2.0615	0.975	USEPA (2007)
Benzo(g,h,i)perylene	-0.9313	1.1829	USEPA (2007)
Benzo(k)fluoranthene	-2.1579	0.8595	USEPA (2007)
Chrysene	-2.7078	0.5944	USEPA (2007)
Fluorene	-5.562	-0.8556	USEPA (2007)
Phenanthrene	-0.1665	0.6203	USEPA (2007)

b, Soil-to-plant BAF based on K_{ow} model for non-ionic organic compounds (rinsed foliage data) provided in USEPA (2005), where: log BAF = -0.4057(log K_{ow}) + 1.781; log K_{ow} values obtained from EPA EpiSuite V. 1.69, KOWWIN module.

c, Soil-invertebrate bioaccumulation factor could not be identified; therefore, a conservative default accumulation factor of 1.0 was assummed.

d, Soil invertebrate tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-1.421	0.706	Sample et al. (1999)
Cadmium	2.114	0.795	Sample et al. (1999)
Lead	-0.218	0.807	Sample et al. (1999)
Manganese	-0.809	0.682	Sample et al. (1999)
Selenium	-0.075	0.733	Sample et al. (1999)
Zinc	4.449	0.328	Sample et al. (1999)
2,3,7,8-TCDD	3.533	1.182	Sample et al. (1998a)

e, Bioaccumulation factor estimated as the product of the soil-plant and ingestion-beef factors reported in Baes et al. (1984)

f, Small mammal tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-4.8471	0.8188	Sample et al. (1998b)
Cadmium	-1.2571	0.4723	Sample et al. (1998b)
Chromium	-1.4599	0.7338	Sample et al. (1998b)
Cobalt	-4.4669	1.307	Sample et al. (1998b)
Copper	2.042	0.1444	Sample et al. (1998b)
Lead	0.0761	0.4422	Sample et al. (1998b)
Nickel	-0.2462	0.4658	Sample et al. (1998b)
Selenium	-0.4158	0.3764	Sample et al. (1998b)
Zinc	4.3632	0.0706	Sample et al. (1998b)
2,3,7,8-TCDD	0.8113	1.0993	Sample et al. (1998b)

g, Pentachlorophenol concentration in small mammal tissue (mg/kg dry weight) calculated based on regression models, where [tissue] = 0.198 + 0.00452([$diet_{invertebrate}$])

h, USEPA (2005) assumes bioaccumulation of PAHs by birds and mammals is minimal due to rapid metabolism of these compounds after ingestion.

i, Small mammal tissue estimated based on the medial BAF for the general model presented in Sample et al. (1998b)

j, No value was identified in the literature. Soil-to-small mammal BF estimated based on the approach presented in Table 5, consistent with LANL (2017).

Notes:

a, Plant tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]). Slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Antimony	-3.233	0.938	USEPA (2007)
Beryllium	-0.5361	0.7345	USEPA (2007)
Cadmium	-0.475	0.546	Bechtel-Jacobs (1998)
Copper	0.668	0.394	Bechtel-Jacobs (1998)
Lead	-1.328	0.561	Bechtel-Jacobs (1998)
Mercury	-0.996	0.544	Bechtel-Jacobs (1998)
Nickel	-2.223	0.748	Bechtel-Jacobs (1998)
Selenium	-0.677	1.104	Bechtel-Jacobs (1998)
Zinc	1.575	0.554	Bechtel-Jacobs (1998)
Acenaphthene	-5.562	-0.8556	USEPA (2007)
Acenaphthylene	-1.144	0.791	USEPA (2007)
Anthracene	-0.9887	0.7784	USEPA (2007)
Benzo(a)anthracene	-2.7078	0.5944	USEPA (2007)
Benzo(a)pyrene	-2.0615	0.975	USEPA (2007)
Benzo(g,h,i)perylene	-0.9313	1.1829	USEPA (2007)
Benzo(k)fluoranthene	-2.1579	0.8595	USEPA (2007)
Chrysene	-2.7078	0.5944	USEPA (2007)
Fluorene	-5.562	-0.8556	USEPA (2007)
Phenanthrene	-0.1665	0.6203	USEPA (2007)

b, Soil-to-plant BAF based on K_{ow} model for non-ionic organic compounds (rinsed foliage data) provided in USEPA (2005), where: log BAF = -0.4057(log K_{ow}) + 1.781; log K_{ow} values obtained from EPA EpiSuite V. 1.69, KOWWIN module.

c, Soil-invertebrate bioaccumulation factor could not be identified; therefore, a conservative default accumulation factor of 1.0 was assummed.

d, Soil invertebrate tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-1.421	0.706	Sample et al. (1999)
Cadmium	2.114	0.795	Sample et al. (1999)
Lead	-0.218	0.807	Sample et al. (1999)
Manganese	-0.809	0.682	Sample et al. (1999)
Selenium	-0.075	0.733	Sample et al. (1999)
Zinc	4.449	0.328	Sample et al. (1999)
2,3,7,8-TCDD	3.533	1.182	Sample et al. (1998a)

e, Bioaccumulation factor estimated as the product of the soil-plant and ingestion-beef factors reported in Baes et al. (1984)

f, Small mammal tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-4.8471	0.8188	Sample et al. (1998b)
Cadmium	-1.2571	0.4723	Sample et al. (1998b)
Chromium	-1.4599	0.7338	Sample et al. (1998b)
Cobalt	-4.4669	1.307	Sample et al. (1998b)
Copper	2.042	0.1444	Sample et al. (1998b)
Lead	0.0761	0.4422	Sample et al. (1998b)
Nickel	-0.2462	0.4658	Sample et al. (1998b)
Selenium	-0.4158	0.3764	Sample et al. (1998b)
Zinc	4.3632	0.0706	Sample et al. (1998b)
2,3,7,8-TCDD	0.8113	1.0993	Sample et al. (1998b)

g, Pentachlorophenol concentration in small mammal tissue (mg/kg dry weight) calculated based on regression models, where [tissue] = 0.198 + 0.00452([diet$_{invertebrate}$])

h, USEPA (2005) assumes bioaccumulation of PAHs by birds and mammals is minimal due to rapid metabolism of these compounds after ingestion.

i, Small mammal tissue estimated based on the medial BAF for the general model presented in Sample et al. (1998b)

j, No value was identified in the literature. Soil-to-small mammal BF estimated based on the approach presented in Table 5, consistent with LANL (2017).

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Table H20-1a
Estimated Concentrations in Dietary Items of Terrestrial Receptors - Flathead River Riparian Area (0 - 0.5' Interval)
Baseline Ecological Risk Assessment
Columbia Falls Aluminum Company
Columbia Falls, Montana

Notes:

a, Plant tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]). Slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Antimony	-3.233	0.938	USEPA (2007)
Beryllium	-0.5361	0.7345	USEPA (2007)
Cadmium	-0.475	0.546	Bechtel-Jacobs (1998)
Copper	0.668	0.394	Bechtel-Jacobs (1998)
Lead	-1.328	0.561	Bechtel-Jacobs (1998)
Mercury	-0.996	0.544	Bechtel-Jacobs (1998)
Nickel	-2.223	0.748	Bechtel-Jacobs (1998)
Selenium	-0.677	1.104	Bechtel-Jacobs (1998)
Zinc	1.575	0.554	Bechtel-Jacobs (1998)
Acenaphthene	-5.562	-0.8556	USEPA (2007)
Acenaphthylene	-1.144	0.791	USEPA (2007)
Anthracene	-0.9887	0.7784	USEPA (2007)
Benzo(a)anthracene	-2.7078	0.5944	USEPA (2007)
Benzo(a)pyrene	-2.0615	0.975	USEPA (2007)
Benzo(g,h,i)perylene	-0.9313	1.1829	USEPA (2007)
Benzo(k)fluoranthene	-2.1579	0.8595	USEPA (2007)
Chrysene	-2.7078	0.5944	USEPA (2007)
Fluorene	-5.562	-0.8556	USEPA (2007)
Phenanthrene	-0.1665	0.6203	USEPA (2007)

b, Soil-to-plant BAF based on K_{ow} model for non-ionic organic compounds (rinsed foliage data) provided in USEPA (2005), where: log BAF = -0.4057(log K_{ow}) + 1.781; log K_{ow} values obtained from EPA EpiSuite V. 1.69, KOWWIN module.

c, Soil-invertebrate bioaccumulation factor could not be identified; therefore, a conservative default accumulation factor of 1.0 was assumed.

d, Soil invertebrate tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-1.421	0.706	Sample et al. (1999)
Cadmium	2.114	0.795	Sample et al. (1999)
Lead	-0.218	0.807	Sample et al. (1999)
Manganese	-0.809	0.682	Sample et al. (1999)
Selenium	-0.075	0.733	Sample et al. (1999)
Zinc	4.449	0.328	Sample et al. (1999)
2,3,7,8-TCDD	3.533	1.182	Sample et al. (1998a)

e, Bioaccumulation factor estimated as the product of the soil-plant and ingestion-beef factors reported in Baes et al. (1984)

f, Median soil-to-plant uptake factors reported in Bechtel (1998a) were used as bioaccumulation factors.

f, Small mammal tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-4.8471	0.8188	Sample et al. (1998b)
Cadmium	-1.2571	0.4723	Sample et al. (1998b)
Chromium	-1.4599	0.7338	Sample et al. (1998b)
Cobalt	-4.4669	1.307	Sample et al. (1998b)
Copper	2.042	0.1444	Sample et al. (1998b)
Lead	0.0761	0.4422	Sample et al. (1998b)
Nickel	-0.2462	0.4658	Sample et al. (1998b)
Selenium	-0.4158	0.3764	Sample et al. (1998b)
Zinc	4.3632	0.0706	Sample et al. (1998b)
2,3,7,8-TCDD	0.8113	1.0993	Sample et al. (1998b)

g, Pentachlorophenol concentration in small mammal tissue (mg/kg dry weight) calculated based on regression models, where [tissue] = 0.198 + 0.00452([$diet_{invertebrate}$])

h, USEPA (2005) assumes bioaccumulation of PAHs by birds and mammals is minimal due to rapid metabolism of these compounds after ingestion.

i, Small mammal tissue estimated based on the medial BAF for the general model presented in Sample et al. (1998b)

j, No value was identified in the literature. Soil-to-small mammal BF estimated based on the approach presented in Table 5, consistent with LANL (2017).

Table H20-1b
Estimated Concentrations in Dietary Items of Terrestrial Receptors - Flathead River Riparian Area (0 -2' Interval)
Baseline Ecological Risk Assessment
Columbia Falls Aluminum Company
Columbia Falls, Montana

Notes:

a, Plant tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]). Slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Antimony	-3.233	0.938	USEPA (2007)
Beryllium	-0.5361	0.7345	USEPA (2007)
Cadmium	-0.475	0.546	Bechtel-Jacobs (1998)
Copper	0.668	0.394	Bechtel-Jacobs (1998)
Lead	-1.328	0.561	Bechtel-Jacobs (1998)
Mercury	-0.996	0.544	Bechtel-Jacobs (1998)
Nickel	-2.223	0.748	Bechtel-Jacobs (1998)
Selenium	-0.677	1.104	Bechtel-Jacobs (1998)
Zinc	1.575	0.554	Bechtel-Jacobs (1998)
Acenaphthene	-5.562	-0.8556	USEPA (2007)
Acenaphthylene	-1.144	0.791	USEPA (2007)
Anthracene	-0.9887	0.7784	USEPA (2007)
Benzo(a)anthracene	-2.7078	0.5944	USEPA (2007)
Benzo(a)pyrene	-2.0615	0.975	USEPA (2007)
Benzo(g,h,i)perylene	-0.9313	1.1829	USEPA (2007)
Benzo(k)fluoranthene	-2.1579	0.8595	USEPA (2007)
Chrysene	-2.7078	0.5944	USEPA (2007)
Fluorene	-5.562	-0.8556	USEPA (2007)
Phenanthrene	-0.1665	0.6203	USEPA (2007)

b, Soil-to-plant BAF based on K_{ow} model for non-ionic organic compounds (rinsed foliage data) provided in USEPA (2005), where: log BAF = -0.4057(log K_{ow}) + 1.781; log K_{ow} values obtained from EPA EpiSuite V. 1.69, KOWWIN module.

c, Soil-invertebrate bioaccumulation factor could not be identified; therefore, a conservative default accumulation factor of 1.0 was assumed.

d, Soil invertebrate tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-1.421	0.706	Sample et al. (1999)
Cadmium	2.114	0.795	Sample et al. (1999)
Lead	-0.218	0.807	Sample et al. (1999)
Manganese	-0.809	0.682	Sample et al. (1999)
Selenium	-0.075	0.733	Sample et al. (1999)
Zinc	4.449	0.328	Sample et al. (1999)
2,3,7,8-TCDD	3.533	1.182	Sample et al. (1998a)

e, Bioaccumulation factor estimated as the product of the soil-plant and ingestion-beef factors reported in Baes et al. (1984)

f, Median soil-to-plant uptake factors reported in Bechtel (1998a) were used as bioaccumulation factors.

f, Small mammal tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-4.8471	0.8188	Sample et al. (1998b)
Cadmium	-1.2571	0.4723	Sample et al. (1998b)
Chromium	-1.4599	0.7338	Sample et al. (1998b)
Cobalt	-4.4669	1.307	Sample et al. (1998b)
Copper	2.042	0.1444	Sample et al. (1998b)
Lead	0.0761	0.4422	Sample et al. (1998b)
Nickel	-0.2462	0.4658	Sample et al. (1998b)
Selenium	-0.4158	0.3764	Sample et al. (1998b)
Zinc	4.3632	0.0706	Sample et al. (1998b)
2,3,7,8-TCDD	0.8113	1.0993	Sample et al. (1998b)

g, Pentachlorophenol concentration in small mammal tissue (mg/kg dry weight) calculated based on regression models, where [tissue] = 0.198 + 0.00452([$diet_{invertebrate}$])

h, USEPA (2005) assumes bioaccumulation of PAHs by birds and mammals is minimal due to rapid metabolism of these compounds after ingestion.

i, Small mammal tissue estimated based on the medial BAF for the general model presented in Sample et al. (1998b)

j, No value was identified in the literature. Soil-to-small mammal BF estimated based on the approach presented in Table 5, consistent with LANL (2017).

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Plant tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]). Slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Antimony	-3.233	9.38E-01	USEPA (2007)
Beryllium	-0.5361	7.35E-01	USEPA (2007)
Cadmium	-0.475	5.46E-01	Bechtel-Jacobs (1998)
Copper	0.668	3.94E-01	Bechtel-Jacobs (1998)
Lead	-1.328	5.61E-01	Bechtel-Jacobs (1998)
Mercury	-9.96E-01	0.544	Bechtel-Jacobs (1998)
Nickel	-2.223	7.48E-01	Bechtel-Jacobs (1998)
Selenium	-0.677	1.10E+00	Bechtel-Jacobs (1998)
Zinc	1.575	5.54E-01	Bechtel-Jacobs (1998)
Acenaphthene	-5.562	-8.56E-01	USEPA (2007)
Acenaphthylene	-1.144	7.91E-01	USEPA (2007)
Anthracene	-0.9887	7.78E-01	USEPA (2007)
Benzo(a)anthracene	-2.7078	5.94E-01	USEPA (2007)
Benzo(a)pyrene	-2.0615	9.75E-01	USEPA (2007)
Benzo(g,h,i)perylene	-0.9313	1.18E+00	USEPA (2007)
Benzo(k)fluoranthene	-2.1579	8.60E-01	USEPA (2007)
Chrysene	-2.7078	5.94E-01	USEPA (2007)
Fluorene	-5.562	-8.56E-01	USEPA (2007)
Phenanthrene	-0.1665	6.20E-01	USEPA (2007)

b, Soil-to-plant BAF based on K_{ow} model for non-ionic organic compounds (rinsed foliage data) provided in USEPA (2005), where: log BAF = -0.4057(log K_{ow}) + 1.781; log K_{ow} values obtained from EPA EpiSuite V. 1.69, KOWWIN module.

c, Soil-invertebrate bioaccumulation factor could not be identified; therefore, a conservative default accumulation factor of 1.0 was assumed.

d, Soil invertebrate tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-1.421	7.06E-01	Sample et al. (1999)
Cadmium	2.114	7.95E-01	Sample et al. (1999)
Lead	-0.218	8.07E-01	Sample et al. (1999)
Manganese	-0.809	6.82E-01	Sample et al. (1999)
Selenium	-0.075	7.33E-01	Sample et al. (1999)
Zinc	4.449	3.28E-01	Sample et al. (1999)
2,3,7,8-TCDD	3.533	1.18E+00	Sample et al. (1998a)

e, Bioaccumulation factor estimated as the product of the soil-plant and ingestion-beef factors reported in Baes et al. (1984)

f, Median soil-to-plant uptake factors reported in Bechtel (1998a) were used as bioaccumulation factors.

f, Small mammal tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-4.8471	8.19E-01	Sample et al. (1998b)
Cadmium	-1.2571	4.72E-01	Sample et al. (1998b)

2,3,7,8-TCDD	0.8113	1.10E+00	Sample et al. (1998b)

g, Pentachlorophenol concentration in small mammal tissue (mg/kg dry weight) calculated based on regression models, where [tissue] = 0.198 + 0.00452([$diet_{invertebrate}$])

h, USEPA (2005) assumes bioaccumulation of PAHs by birds and mammals is minimal due to rapid metabolism of these compounds after ingestion.

i, Small mammal tissue estimated based on the medial BAF for the general model presented in Sample et al. (1998b)

j, No value was identified in the literature. Soil-to-small mammal BF estimated based on the approach presented in Table 5, consistent with LANL (2017).

Table H21-1b
Estimated Concentrations in Dietary Items of Terrestrial Receptors - North Percolation Pond Area (0 - 2' Interval)
Baseline Ecological Risk Assessment
Columbia Falls Aluminum Company
Columbia Falls, Montana

Notes:

a, Plant tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]). Slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Antimony	-3.233	9.38E-01	USEPA (2007)
Beryllium	-0.5361	7.35E-01	USEPA (2007)
Cadmium	-0.475	5.46E-01	Bechtel-Jacobs (1998)
Copper	0.668	3.94E-01	Bechtel-Jacobs (1998)
Lead	-1.328	5.61E-01	Bechtel-Jacobs (1998)
Mercury	-0.996	5.44E-01	Bechtel-Jacobs (1998)
Nickel	-2.223	7.48E-01	Bechtel-Jacobs (1998)
Selenium	-0.677	1.10E+00	Bechtel-Jacobs (1998)
Zinc	1.575	5.54E-01	Bechtel-Jacobs (1998)
Acenaphthene	-5.562	-8.56E-01	USEPA (2007)
Acenaphthylene	-1.144	7.91E-01	USEPA (2007)
Anthracene	-0.9887	7.78E-01	USEPA (2007)
Benzo(a)anthracene	-2.7078	5.94E-01	USEPA (2007)
Benzo(a)pyrene	-2.0615	9.75E-01	USEPA (2007)
Benzo(g,h,i)perylene	-0.9313	1.18E+00	USEPA (2007)
Benzo(k)fluoranthene	-2.1579	8.60E-01	USEPA (2007)
Chrysene	-2.7078	5.94E-01	USEPA (2007)
Fluorene	-5.562	-8.56E-01	USEPA (2007)
Phenanthrene	-0.1665	6.20E-01	USEPA (2007)

b, Soil-to-plant BAF based on K_{ow} model for non-ionic organic compounds (rinsed foliage data) provided in USEPA (2005), where: log BAF = -0.4057(log K_{ow}) + 1.781; log K_{ow} values obtained from EPA EpiSuite V. 1.69, KOWWIN module.

c, Soil-invertebrate bioaccumulation factor could not be identified; therefore, a conservative default accumulation factor of 1.0 was assumed.

d, Soil invertebrate tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-1.421	7.06E-01	Sample et al. (1999)
Cadmium	2.114	7.95E-01	Sample et al. (1999)
Lead	-0.218	8.07E-01	Sample et al. (1999)
Manganese	-0.809	6.82E-01	Sample et al. (1999)
Selenium	-0.075	7.33E-01	Sample et al. (1999)
Zinc	4.449	3.28E-01	Sample et al. (1999)
2,3,7,8-TCDD	3.533	1.18E+00	Sample et al. (1998a)

e, Bioaccumulation factor estimated as the product of the soil-plant and ingestion-beef factors reported in Baes et al. (1984)

f, Median soil-to-plant uptake factors reported in Bechtel (1998a) were used as bioaccumulation factors.

f, Small mammal tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-4.8471	8.19E-01	Sample et al. (1998b)
Cadmium	-1.2571	4.72E-01	Sample et al. (1998b)
Chromium	-1.4599	7.34E-01	Sample et al. (1998b)
Cobalt	-4.4669	1.31E+00	Sample et al. (1998b)
Copper	2.042	1.44E-01	Sample et al. (1998b)
Lead	0.0761	4.42E-01	Sample et al. (1998b)
Nickel	-0.2462	4.66E-01	Sample et al. (1998b)
Selenium	-0.4158	3.76E-01	Sample et al. (1998b)
Zinc	4.3632	7.06E-02	Sample et al. (1998b)
2,3,7,8-TCDD	0.8113	1.10E+00	Sample et al. (1998b)

g, Pentachlorophenol concentration in small mammal tissue (mg/kg dry weight) calculated based on regression models, where [tissue] = 0.198 + 0.00452([$diet_{invertebrate}$])

h, USEPA (2005) assumes bioaccumulation of PAHs by birds and mammals is minimal due to rapid metabolism of these compounds after ingestion.

i, Small mammal tissue estimated based on the medial BAF for the general model presented in Sample et al. (1998b)

j, No value was identified in the literature. Soil-to-small mammal BF estimated based on the approach presented in Table 5, consistent with LANL (2017).

Notes:
NA, Normalized BSAF was not applicable for metals
a, Normalized BSAF (kg OC / kg lipid) calculated based on K_{ow}, where BSAF = $K_{ow}^{-0.038}$ (DiToro and McGrath 2000)
b, For non-ionic organic constituents, dry weight BSAF calculated from sediment organic carbon and lipid normalized BSAF as follows:

$$BSAF_{dry\ weight} = BSAF_{norm} \times f_{lip;id} \times \frac{1}{f_{oc}}$$

where: $BSAF_{norm}$ = Normalized BSAF (kg OC/kg lipid)
f_{lipid} = Fraction of lipids in prey item expressed on a dry weight basis (0.065, invertebrates; 0.08, fish)
f_{oc} = Fraction of sediment organic carbon expressed on a dry weight basis (0.01 or 1%)
c, Median BSAF for non-depurated invertebrates determined by Bechtel-Jacobs (1998b)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Benzo(a)anthracene	-2.7078	5.94E-01	USEPA (2007)
Benzo(a)pyrene	-2.0615	9.75E-01	USEPA (2007)
Benzo(g,h,i)perylene	-0.9313	1.18E+00	USEPA (2007)
Benzo(k)fluoranthene	-2.1579	8.60E-01	USEPA (2007)
Chrysene	-2.7078	5.94E-01	USEPA (2007)
Fluorene	-5.562	-8.56E-01	USEPA (2007)
Phenanthrene	-0.1665	6.20E-01	USEPA (2007)

b, Soil-to-plant BAF based on K_{ow} model for non-ionic organic compounds (rinsed foliage data) provided in USEPA (2005), where: log BAF = -0.4057(log K_{ow}) + 1.781; log K_{ow} values obtained from EPA EpiSuite V. 1.69, KOWWIN module.

c, Soil-invertebrate bioaccumulation factor could not be identified; therefore, a conservative default accumulation factor of 1.0 was assumed.

d, Soil invertebrate tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-1.421	7.06E-01	Sample et al. (1999)
Cadmium	2.114	7.95E-01	Sample et al. (1999)
Lead	-0.218	8.07E-01	Sample et al. (1999)
Manganese	-0.809	6.82E-01	Sample et al. (1999)
Selenium	-0.075	7.33E-01	Sample et al. (1999)
Zinc	4.449	3.28E-01	Sample et al. (1999)
2,3,7,8-TCDD	3.533	1.18E+00	Sample et al. (1998a)

e, Bioaccumulation factor estimated as the product of the soil-plant and ingestion-beef factors reported in Baes et al. (1984)

f, Median soil-to-plant uptake factors reported in Bechtel (1998a) were used as bioaccumulation factors.

f, Small mammal tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-4.8471	8.19E-01	Sample et al. (1998b)
Cadmium	-1.2571	4.72E-01	Sample et al. (1998b)
Chromium	-1.4599	7.34E-01	Sample et al. (1998b)
Cobalt	-4.4669	1.31E+00	Sample et al. (1998b)
Copper	2.042	1.44E-01	Sample et al. (1998b)
Lead	0.0761	4.42E-01	Sample et al. (1998b)
Nickel	-0.2462	4.66E-01	Sample et al. (1998b)
Selenium	-0.4158	3.76E-01	Sample et al. (1998b)
Zinc	4.3632	7.06E-02	Sample et al. (1998b)
2,3,7,8-TCDD	0.8113	1.10E+00	Sample et al. (1998b)

g, Pentachlorophenol concentration in small mammal tissue (mg/kg dry weight) calculated based on regression models, where [tissue] = 0.198 + 0.00452([$diet_{invertebrate}$])

h, USEPA (2005) assumes bioaccumulation of PAHs by birds and mammals is minimal due to rapid metabolism of these compounds after ingestion.

i, Small mammal tissue estimated based on the medial BAF for the general model presented in Sample et al. (1998b)

j, No value was identified in the literature. Soil-to-small mammal BF estimated based on the approach presented in Table 5, consistent with LANL (2017).

Benzo(k)fluoranthene	-2.1579	8.60E-01	USEPA (2007)
Chrysene	-2.7078	5.94E-01	USEPA (2007)
Fluorene	-5.562	-8.56E-01	USEPA (2007)
Phenanthrene	-0.1665	6.20E-01	USEPA (2007)

b, Soil-to-plant BAF based on K_{ow} model for non-ionic organic compounds (rinsed foliage data) provided in USEPA (2005), where: log BAF = -0.4057(log K_{ow}) + 1.781; log K_{ow} values obtained from EPA EpiSuite V. 1.69, KOWWIN module.

c, Soil-invertebrate bioaccumulation factor could not be identified; therefore, a conservative default accumulation factor of 1.0 was assumed.

d, Soil invertebrate tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-1.421	7.06E-01	Sample et al. (1999)
Cadmium	2.114	7.95E-01	Sample et al. (1999)
Lead	-0.218	8.07E-01	Sample et al. (1999)
Manganese	-0.809	6.82E-01	Sample et al. (1999)
Selenium	-0.075	7.33E-01	Sample et al. (1999)
Zinc	4.449	3.28E-01	Sample et al. (1999)
2,3,7,8-TCDD	3.533	1.18E+00	Sample et al. (1998a)

e, Bioaccumulation factor estimated as the product of the soil-plant and ingestion-beef factors reported in Baes et al. (1984)

f, Median soil-to-plant uptake factors reported in Bechtel (1998a) were used as bioaccumulation factors.

f, Small mammal tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-4.8471	8.19E-01	Sample et al. (1998b)
Cadmium	-1.2571	4.72E-01	Sample et al. (1998b)
Chromium	-1.4599	7.34E-01	Sample et al. (1998b)
Cobalt	-4.4669	1.31E+00	Sample et al. (1998b)
Copper	2.042	1.44E-01	Sample et al. (1998b)
Lead	0.0761	4.42E-01	Sample et al. (1998b)
Nickel	-0.2462	4.66E-01	Sample et al. (1998b)
Selenium	-0.4158	3.76E-01	Sample et al. (1998b)
Zinc	4.3632	7.06E-02	Sample et al. (1998b)
2,3,7,8-TCDD	0.8113	1.10E+00	Sample et al. (1998b)

g, Pentachlorophenol concentration in small mammal tissue (mg/kg dry weight) calculated based on regression models, where [tissue] = 0.198 + 0.00452([$diet_{invertebrate}$])

h, USEPA (2005) assumes bioaccumulation of PAHs by birds and mammals is minimal due to rapid metabolism of these compounds after ingestion.

i, Small mammal tissue estimated based on the medial BAF for the general model presented in Sample et al. (1998b)

j, No value was identified in the literature. Soil-to-small mammal BF estimated based on the approach presented in Table 5, consistent with LANL (2017).

Notes:
NA, Normalized BSAF was not applicable for metals
a, Normalized BSAF (kg OC / kg lipid) calculated based on K_{ow}, where BSAF = $K_{ow}^{-0.038}$ (DiToro and McGrath 2000)
b, For non-ionic organic constituents, dry weight BSAF calculated from sediment organic carbon and lipid normalized BSAF as follows:

$$BSAF_{dry\ weight} = BSAF_{norm} \times f_{lip;id} \times \frac{1}{f_{oc}}$$

where: $BSAF_{norm}$ = Normalized BSAF (kg OC/kg lipid)
f_{lipid} = Fraction of lipids in prey item expressed on a dry weight basis (0.065, invertebrates; 0.08, fish)
f_{oc} = Fraction of sediment organic carbon expressed on a dry weight basis (0.01 or 1%)
c, Median BSAF for non-depurated invertebrates determined by Bechtel-Jacobs (1998b)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Table H23-1a
Estimated Concentrations in Dietary Items of Terrestrial Receptors - Cedar Creek Reservoir Overflow Ditch (0 - 0.5' Interval)
Baseline Ecological Risk Assessment
Columbia Falls Aluminum Company
Columbia Falls, Montana

Notes:

a, Plant tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]). Slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Antimony	-3.233	9.38E-01	USEPA (2007)
Beryllium	-0.5361	7.35E-01	USEPA (2007)
Cadmium	-0.475	5.46E-01	Bechtel-Jacobs (1998)
Copper	0.668	3.94E-01	Bechtel-Jacobs (1998)
Lead	-1.328	5.61E-01	Bechtel-Jacobs (1998)
Mercury	-0.996	5.44E-01	Bechtel-Jacobs (1998)
Nickel	-2.223	7.48E-01	Bechtel-Jacobs (1998)
Selenium	-0.677	1.10E+00	Bechtel-Jacobs (1998)
Zinc	1.575	5.54E-01	Bechtel-Jacobs (1998)
Acenaphthene	-5.562	-8.56E-01	USEPA (2007)
Acenaphthylene	-1.144	7.91E-01	USEPA (2007)
Anthracene	-0.9887	7.78E-01	USEPA (2007)
Benzo(a)anthracene	-2.7078	5.94E-01	USEPA (2007)
Benzo(a)pyrene	-2.0615	9.75E-01	USEPA (2007)
Benzo(g,h,i)perylene	-0.9313	1.18E+00	USEPA (2007)
Benzo(k)fluoranthene	-2.1579	8.60E-01	USEPA (2007)
Chrysene	-2.7078	5.94E-01	USEPA (2007)
Fluorene	-5.562	-8.56E-01	USEPA (2007)
Phenanthrene	-0.1665	6.20E-01	USEPA (2007)

b, Soil-to-plant BAF based on K_{ow} model for non-ionic organic compounds (rinsed foliage data) provided in USEPA (2005), where: log BAF = -0.4057(log K_{ow}) + 1.781; log K_{ow} values obtained from EPA EpiSuite V. 1.69, KOWWIN module.

c, Soil-invertebrate bioaccumulation factor could not be identified; therefore, a conservative default accumulation factor of 1.0 was assumed.

d, Soil invertebrate tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-1.421	7.06E-01	Sample et al. (1999)
Cadmium	2.114	7.95E-01	Sample et al. (1999)
Lead	-0.218	8.07E-01	Sample et al. (1999)
Manganese	-0.809	6.82E-01	Sample et al. (1999)
Selenium	-0.075	7.33E-01	Sample et al. (1999)
Zinc	4.449	3.28E-01	Sample et al. (1999)
2,3,7,8-TCDD	3.533	1.18E+00	Sample et al. (1998a)

e, Bioaccumulation factor estimated as the product of the soil-plant and ingestion-beef factors reported in Baes et al. (1984)

f, Median soil-to-plant uptake factors reported in Bechtel (1998a) were used as bioaccumulation factors.

f, Small mammal tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-4.8471	8.19E-01	Sample et al. (1998b)
Cadmium	-1.2571	4.72E-01	Sample et al. (1998b)
Chromium	-1.4599	7.34E-01	Sample et al. (1998b)
Cobalt	-4.4669	1.31E+00	Sample et al. (1998b)
Copper	2.042	1.44E-01	Sample et al. (1998b)
Lead	0.0761	4.42E-01	Sample et al. (1998b)
Nickel	-0.2462	4.66E-01	Sample et al. (1998b)
Selenium	-0.4158	3.76E-01	Sample et al. (1998b)
Zinc	4.3632	7.06E-02	Sample et al. (1998b)
2,3,7,8-TCDD	0.8113	1.10E+00	Sample et al. (1998b)

g, Pentachlorophenol concentration in small mammal tissue (mg/kg dry weight) calculated based on regression models, where [tissue] = 0.198 + 0.00452([diet$_{invertebrate}$])

h, USEPA (2005) assumes bioaccumulation of PAHs by birds and mammals is minimal due to rapid metabolism of these compounds after ingestion.

i, Small mammal tissue estimated based on the medial BAF for the general model presented in Sample et al. (1998b)

j, No value was identified in the literature. Soil-to-small mammal BF estimated based on the approach presented in Table 5, consistent with LANL (2017).

Table H23-1b
Estimated Concentrations in Dietary Items of Terrestrial Receptors - Cedar Creek Reservoir Overflow Ditch (0 - 2' Interval)
Baseline Ecological Risk Assessment
Columbia Falls Aluminum Company
Columbia Falls, Montana

Notes:

a, Plant tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]). Slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Antimony	-3.233	9.38E-01	USEPA (2007)
Beryllium	-0.5361	7.35E-01	USEPA (2007)
Cadmium	-0.475	5.46E-01	Bechtel-Jacobs (1998)
Copper	0.668	3.94E-01	Bechtel-Jacobs (1998)
Lead	-1.328	5.61E-01	Bechtel-Jacobs (1998)
Mercury	-0.996	5.44E-01	Bechtel-Jacobs (1998)
Nickel	-2.223	7.48E-01	Bechtel-Jacobs (1998)
Selenium	-0.677	1.10E+00	Bechtel-Jacobs (1998)
Zinc	1.575	5.54E-01	Bechtel-Jacobs (1998)
Acenaphthene	-5.562	-8.56E-01	USEPA (2007)
Acenaphthylene	-1.144	7.91E-01	USEPA (2007)
Anthracene	-0.9887	7.78E-01	USEPA (2007)
Benzo(a)anthracene	-2.7078	5.94E-01	USEPA (2007)
Benzo(a)pyrene	-2.0615	9.75E-01	USEPA (2007)
Benzo(g,h,i)perylene	-0.9313	1.18E+00	USEPA (2007)
Benzo(k)fluoranthene	-2.1579	8.60E-01	USEPA (2007)
Chrysene	-2.7078	5.94E-01	USEPA (2007)
Fluorene	-5.562	-8.56E-01	USEPA (2007)
Phenanthrene	-0.1665	6.20E-01	USEPA (2007)

b, Soil-to-plant BAF based on K_{ow} model for non-ionic organic compounds (rinsed foliage data) provided in USEPA (2005), where: log BAF = -0.4057(log K_{ow}) + 1.781; log K_{ow} values obtained from EPA EpiSuite V. 1.69, KOWWIN module.

c, Soil-invertebrate bioaccumulation factor could not be identified; therefore, a conservative default accumulation factor of 1.0 was assumed.

d, Soil invertebrate tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-1.421	7.06E-01	Sample et al. (1999)
Cadmium	2.114	7.95E-01	Sample et al. (1999)
Lead	-0.218	8.07E-01	Sample et al. (1999)
Manganese	-0.809	6.82E-01	Sample et al. (1999)
Selenium	-0.075	7.33E-01	Sample et al. (1999)
Zinc	4.449	3.28E-01	Sample et al. (1999)
2,3,7,8-TCDD	3.533	1.18E+00	Sample et al. (1998a)

e, Bioaccumulation factor estimated as the product of the soil-plant and ingestion-beef factors reported in Baes et al. (1984)

f, Median soil-to-plant uptake factors reported in Bechtel (1998a) were used as bioaccumulation factors.

f, Small mammal tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-4.8471	8.19E-01	Sample et al. (1998b)
Cadmium	-1.2571	4.72E-01	Sample et al. (1998b)
Chromium	-1.4599	7.34E-01	Sample et al. (1998b)
Cobalt	-4.4669	1.31E+00	Sample et al. (1998b)
Copper	2.042	1.44E-01	Sample et al. (1998b)
Lead	0.0761	4.42E-01	Sample et al. (1998b)
Nickel	-0.2462	4.66E-01	Sample et al. (1998b)
Selenium	-0.4158	3.76E-01	Sample et al. (1998b)
Zinc	4.3632	7.06E-02	Sample et al. (1998b)
2,3,7,8-TCDD	0.8113	1.10E+00	Sample et al. (1998b)

g, Pentachlorophenol concentration in small mammal tissue (mg/kg dry weight) calculated based on regression models, where [tissue] = 0.198 + 0.00452([$diet_{invertebrate}$])

h, USEPA (2005) assumes bioaccumulation of PAHs by birds and mammals is minimal due to rapid metabolism of these compounds after ingestion.

i, Small mammal tissue estimated based on the medial BAF for the general model presented in Sample et al. (1998b)

j, No value was identified in the literature. Soil-to-small mammal BF estimated based on the approach presented in Table 5, consistent with LANL (2017).

Notes:
NA, Normalized BSAF was not applicable for metals
a, Normalized BSAF (kg OC / kg lipid) calculated based on K_{ow}, where BSAF = $K_{ow}^{-0.038}$ (DiToro and McGrath 2000)
b, For non-ionic organic constituents, dry weight BSAF calculated from sediment organic carbon and lipid normalized BSAF as follows:

$$BSAF_{dry\ weight} = BSAF_{norm} \times f_{lip;id} \times \frac{1}{f_{oc}}$$

where: $BSAF_{norm}$ = Normalized BSAF (kg OC/kg lipid)
f_{lipid} = Fraction of lipids in prey item expressed on a dry weight basis (0.065, invertebrates; 0.08, fish)
f_{oc} = Fraction of sediment organic carbon expressed on a dry weight basis (0.01 or 1%)
c, Median BSAF for non-depurated invertebrates determined by Bechtel-Jacobs (1998b)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Table H24-1
Estimated Concentrations in Dietary Items of Terrestrial Receptors - Northern Surface Water Feature (0 - 0.5' Interval)
Baseline Ecological Risk Assessment
Columbia Falls Aluminum Company
Columbia Falls, Montana

Notes:

a, Plant tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]). Slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Antimony	-3.233	9.38E-01	USEPA (2007)
Beryllium	-0.5361	7.35E-01	USEPA (2007)
Cadmium	-0.475	5.46E-01	Bechtel-Jacobs (1998)
Copper	0.668	3.94E-01	Bechtel-Jacobs (1998)
Lead	-1.328	5.61E-01	Bechtel-Jacobs (1998)
Mercury	-0.996	5.44E-01	Bechtel-Jacobs (1998)
Nickel	-2.223	7.48E-01	Bechtel-Jacobs (1998)
Selenium	-0.677	1.10E+00	Bechtel-Jacobs (1998)
Zinc	1.575	5.54E-01	Bechtel-Jacobs (1998)
Acenaphthene	-5.562	-8.56E-01	USEPA (2007)
Acenaphthylene	-1.144	7.91E-01	USEPA (2007)
Anthracene	-0.9887	7.78E-01	USEPA (2007)
Benzo(a)anthracene	-2.7078	5.94E-01	USEPA (2007)
Benzo(a)pyrene	-2.0615	9.75E-01	USEPA (2007)
Benzo(g,h,i)perylene	-0.9313	1.18E+00	USEPA (2007)
Benzo(k)fluoranthene	-2.1579	8.60E-01	USEPA (2007)
Chrysene	-2.7078	5.94E-01	USEPA (2007)
Fluorene	-5.562	-8.56E-01	USEPA (2007)
Phenanthrene	-0.1665	6.20E-01	USEPA (2007)

b, Soil-to-plant BAF based on K_{ow} model for non-ionic organic compounds (rinsed foliage data) provided in USEPA (2005), where: log BAF = -0.4057(log K_{ow}) + 1.781; log K_{ow} values obtained from EPA EpiSuite V. 1.69, KOWWIN module.

c, Soil-invertebrate bioaccumulation factor could not be identified; therefore, a conservative default accumulation factor of 1.0 was assumed.

d, Soil invertebrate tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-1.421	7.06E-01	Sample et al. (1999)
Cadmium	2.114	7.95E-01	Sample et al. (1999)
Lead	-0.218	8.07E-01	Sample et al. (1999)
Manganese	-0.809	6.82E-01	Sample et al. (1999)
Selenium	-0.075	7.33E-01	Sample et al. (1999)
Zinc	4.449	3.28E-01	Sample et al. (1999)
2,3,7,8-TCDD	3.533	1.18E+00	Sample et al. (1998a)

e, Bioaccumulation factor estimated as the product of the soil-plant and ingestion-beef factors reported in Baes et al. (1984)

f, Median soil-to-plant uptake factors reported in Bechtel (1998a) were used as bioaccumulation factors.

f, Small mammal tissue concentrations (mg/kg dry weight) calculated based on regression models, where ln([tissue]) = B0 + B1(ln[soil]) and slopes (B1) and intercepts (B0) are as follows:

Analyte	B0	B1	Data Source
Arsenic	-4.8471	8.19E-01	Sample et al. (1998b)
Cadmium	-1.2571	4.72E-01	Sample et al. (1998b)
Chromium	-1.4599	7.34E-01	Sample et al. (1998b)
Cobalt	-4.4669	1.31E+00	Sample et al. (1998b)
Copper	2.042	1.44E-01	Sample et al. (1998b)
Lead	0.0761	4.42E-01	Sample et al. (1998b)
Nickel	-0.2462	4.66E-01	Sample et al. (1998b)
Selenium	-0.4158	3.76E-01	Sample et al. (1998b)
Zinc	4.3632	7.06E-02	Sample et al. (1998b)
2,3,7,8-TCDD	0.8113	1.10E+00	Sample et al. (1998b)

g, Pentachlorophenol concentration in small mammal tissue (mg/kg dry weight) calculated based on regression models, where [tissue] = 0.198 + 0.00452([$diet_{invertebrate}$])

h, USEPA (2005) assumes bioaccumulation of PAHs by birds and mammals is minimal due to rapid metabolism of these compounds after ingestion.

i, Small mammal tissue estimated based on the medial BAF for the general model presented in Sample et al. (1998b)

j, No value was identified in the literature. Soil-to-small mammal BF estimated based on the approach presented in Table 5, consistent with LANL (2017).

Notes:
NA, Normalized BSAF was not applicable for metals
a, Normalized BSAF (kg OC / kg lipid) calculated based on K_{ow}, where BSAF = $K_{ow}^{-0.038}$ (DiToro and McGrath 2000)
b, For non-ionic organic constituents, dry weight BSAF calculated from sediment organic carbon and lipid normalized BSAF as follows:

$$BSAF_{dry\ weight} = BSAF_{norm} \times f_{lip;id} \times \frac{1}{f_{oc}}$$

where: $BSAF_{norm}$ = Normalized BSAF (kg OC/kg lipid)
f_{lipid} = Fraction of lipids in prey item expressed on a dry weight basis (0.065, invertebrates; 0.08, fish)
f_{oc} = Fraction of sediment organic carbon expressed on a dry weight basis (0.01 or 1%)
c, Median BSAF for non-depurated invertebrates determined by Bechtel-Jacobs (1998b)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:
NA, Normalized BSAF was not applicable for metals
a, Normalized BSAF (kg OC / kg lipid) calculated based on K_{ow}, where BSAF = $K_{ow}^{-0.038}$ (DiToro and McGrath 2000)
b, For non-ionic organic constituents, dry weight BSAF calculated from sediment organic carbon and lipid normalized BSAF as follows:

$$BSAF_{dry\ weight} = BSAF_{norm} \times f_{lip;id} \times \frac{1}{f_{oc}}$$

where: $BSAF_{norm}$ = Normalized BSAF (kg OC/kg lipid)
f_{lipid} = Fraction of lipids in prey item expressed on a dry weight basis (0.065, invertebrates; 0.08, fish)
f_{oc} = Fraction of sediment organic carbon expressed on a dry weight basis (0.01 or 1%)
c, Median BSAF for non-depurated invertebrates determined by Bechtel-Jacobs (1998b)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	= Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	= Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	= Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	= Dietary fraction of food item i (proportion of food type in the diet)
AUF	= Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	= Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	= Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	= Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	= COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:
NA, Normalized BSAF was not applicable for metals
a, Normalized BSAF (kg OC / kg lipid) calculated based on K_{ow}, where BSAF = $K_{ow}^{-0.038}$ (DiToro and McGrath 2000)
b, For non-ionic organic constituents, dry weight BSAF calculated from sediment organic carbon and lipid normalized BSAF as follows:

$$BSAF_{dry\ weight} = BSAF_{norm} \times f_{lip;id} \times \frac{1}{f_{oc}}$$

where: $BSAF_{norm}$ = Normalized BSAF (kg OC/kg lipid)
f_{lipid} = Fraction of lipids in prey item expressed on a dry weight basis (0.065, invertebrates; 0.08, fish)
f_{oc} = Fraction of sediment organic carbon expressed on a dry weight basis (0.01 or 1%)
c, Median BSAF for non-depurated invertebrates determined by Bechtel-Jacobs (1998b)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

Notes:

a, Dietary dose calculated as:

$$ADD_{diet} = \frac{IR_{diet} \times \sum (B[S]AF \times C_{substrate} \times DF_i) \times AUF}{BW}$$

b, Substrate dose calculated as:

$$ADD_{substrate} = \frac{IR_{substrate} \times C_{substrate} \times AUF}{BW}$$

c, Total dose calculated as:

$$ADD_{total} = ADD_{diet} + ADD_{water} + ADD_{substrate}$$

--, HQ could not be calculated because TRV was not available.

where:

ADD_{diet}	=	Dose of COPEC obtained from the diet (mg COPEC/kg receptor body weight-day)
IR_{diet}	=	Ingestion rate of food (kg food ingested per day, dry weight)
B(S)AF	=	Bioaccumulation factor (BAF) or biota-sediment accumulation factor (BSAF), specific to prey type and COPEC (kg substrate/kg food, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)
DF_i	=	Dietary fraction of food item i (proportion of food type in the diet)
AUF	=	Area use factor includes seasonal use rates , area use rates, COPEC assimilation rate
BW	=	Body weight of the receptor, wet weight (kg)
$ADD_{substrate}$	=	Dose of COPEC from incidental substrate ingestion (mg COPEC/kg body weight-day)
IR_s	=	Incidental Ingestion Rate of soil (kg substrate ingested per day, dry weight)
$C_{substrate}$	=	COPEC concentration in substrate (mg COPEC/kg substrate, dry weight)

2,4-Dichlorophenol	0.004	--	0.004	0.004
2,4-Dimethylphenol	0.037	--	0.037	0.037

Appendix J2
Summary of RSD-Adjusted Results for Non-Replicate ISS Soil Samples
Baseline Ecological Risk Assessment
Columbia Falls Aluminum Company
Columbia Falls, Montana

Sample Location Name	CFISS-043			
Depth interval (ft)	0.50-2.00			
Sample Name	CFISS-043-SO-0.5-2			
Sample Date	7/18/2016			
Constituent	**Result Value**	**RSD**	**RSD Lower**	**RSD Upper**
2,4-Dinitrophenol	0.13	--	0.13	0.13
2,4-Dinitrotoluene	0.007	--	0.007	0.007
2,6-Dinitrotoluene	0.009	--	0.009	0.009
2-Chloronaphthalene	0.004	--	0.004	0.004
2-Chlorophenol	0.004	--	0.004	0.004
2-Methylphenol (O-Cresol)	0.007	--	0.007	0.007
2-Nitroaniline	0.006	--	0.006	0.006
2-Nitrophenol	0.006	--	0.006	0.006
3- And 4- Methylphenol (Total)	0.004	--	0.004	0.004
3,3'-Dichlorobenzidine	0.019	--	0.019	0.019
3-Nitroaniline	0.005	--	0.005	0.005
4,6-Dinitro-2-Methylphenol	0.044	--	0.044	0.044
4-Bromophenyl Phenyl Ether	0.005	--	0.005	0.005
4-Chloro-3-Methylphenol	0.007	--	0.007	0.007
4-Chloroaniline	0.004	--	0.004	0.004
4-Chlorophenyl Phenyl Ether	0.005	--	0.005	0.005
4-Nitroaniline	0.006	--	0.006	0.006
4-Nitrophenol	0.080	--	0.080	0.080
Acetophenone	0.008	41.1%	0.004	0.011
Atrazine	0.008	--	0.008	0.008
Benzaldehyde	0.013	--	0.013	0.013
Benzyl Butyl Phthalate	0.005	32.7%	0.003	0.007
Biphenyl (Diphenyl)	0.014	98.2%	2.52E-04	0.028
Bis(2-Chloroethoxy) Methane	0.005	--	0.005	0.005
Bis(2-Chloroethyl) Ether (2-Chloroethyl Ether)	0.004	--	0.004	0.004
Bis(2-Chloroisopropyl) Ether	0.007	--	0.007	0.007
Bis(2-Ethylhexyl) Phthalate	0.007	--	0.007	0.007
Caprolactam	0.012	--	0.012	0.012
Carbazole	0.19	76.1%	0.045	0.33
Dibenzofuran	0.065	70.0%	0.019	0.11
Diethyl Phthalate	0.005	--	0.005	0.005
Dimethyl Phthalate	0.005	--	0.005	0.005
Di-N-Butyl Phthalate	0.018	--	0.018	0.018
Di-N-Octylphthalate	0.009	--	0.009	0.009
Hexachlorobenzene	0.007	--	0.007	0.007
Hexachlorobutadiene	0.005	--	0.005	0.005
Hexachlorocyclopentadiene	0.011	--	0.011	0.011
Hexachloroethane	0.006	--	0.006	0.006
Isophorone	0.004	32.5%	0.002	0.005
Nitrobenzene	0.005	--	0.005	0.005
N-Nitrosodi-N-Propylamine	0.006	--	0.006	0.006
N-Nitrosodiphenylamine	0.015	--	0.015	0.015
Pentachlorophenol	0.020	--	0.020	0.020
Phenol	0.006	--	0.006	0.006

Notes:

--: Not Applicable or not measured or calculated
Gray: Non-detect result replaced by 1/2 the MDL
HMW - High molecular weight
LMW - Low molecular weight
MDL: Method Detection Limit
mg/kg - milligram per kilogram
PAH - Polycyclic Aromatic Hydrocarbons
PCB - Polychlorinated Biphenyls
RSD: Relative Standard Deviation
The mean value derived from the RSDs of 4 triplicate ISS samples. See Roux Data Summary Report (Roux, 2019).
RSD Lower: Measured result adjusted downwards by the RSD.
RSD Upper: Measured result adjusted upwards by the RSD.
SVOC - Semi-volatile organic compound
TAL - Target Analyte List
TCL - Target Compound List
